Mrs. Stevens Likes Uniformity

Mrs. Stephens uses about three dozen cans of Pacific Milk each month, and she says that, even above its rich, natural flavor, she likes its absolute uniformity of quality. "It never varies," she says, "and is adaptable to use in any food—always the same, rich, sweet and good milk."

Ten Years Ago in Prince Rupert

August 11, 1914.

Enlistments for the Great War received by Fred Stork of this city have been cancelled following receipt of advice from the Department of Militia at Ottawa stating that the force will be Imperial and have the status of British regular troops. Mr. Stork was instructed in error to accept recruits for the Canadian contingent.

Word has been received that 400 Irish Fusiliers are coming from Vancouver to guard the railway and terminal facilities here. The city is to furnish quarters for the men who will sail within 48 hours.

A large gathering of local ladies took place in the Knights of Pythias Hall yesterday afternoon to consider ways and means of raising money for a hospital ship. Prince Rupert's share is $500.

AGE OF MAN ON THIS CONTINENT DOES NOT DATE VERY FAR BACK

Fossils Indicate Only Few Thousand of Years; Los Angeles Oldest Yet

TORONTO, Aug. 11. — Six human skeletons unearthed during the course of excavations for a sewer in the outskirts of Los Angles are to date the oldest evidence of the existence of human life on this continent according to Dr. A. Hrdlicks, curator of the United States National Museum, who discussed Man's Antiquity in America in the anthropology section of the British Association today. "Findings of fossilized human remains in Ecuador, the Valley of Mexico and parts of the United States, especially in California have stimulated research on the early inhabitants of this continent," Dr. Hrdlicks said. Discussing specimens of varying antiquity which have been found recently, he inferred that a geological antiquity for man's habitation in America has still to be proved, despite the fact that some of the remains have been found under conditions which strongly suggest it.

"According to indications, man's antiquity here is still not geological, it is not an age to be measured in tens of thousands of years." Thus the specimens found in America are relatively recent in comparison with latest to be unearthed in Europe, which date back tens, and possibly hundreds of thousands of years.

WANTED IRON

Hardware Dealer — Anything for you today, Mose?

Mose—Yes, suh; de doctor tole me as how I mus' take some iron fur my blood, and I s'pects I might as well buy it from you. —Good Hardware.

FINE LITTLE YACHT ARRIVED LAST NIGHT

Arro Brought Mr. and Mrs. Frost Snyder From Tacoma En Route Ketchikan

It was only in Johnstone Strait that the power boat Arro, owned by Frost Snyder of the Tacoma Yacht Club, had any trouble coming north. There a sudden squall of wind blowing against a fast flowing tide whipped up the waves so that they came over the yacht and made things unpleasant for a few minutes. The Arro arrived in port last evening and tied up at the Yacht Club and left for Ketchikan today. Mr. Snyder has Mrs. Synder with him and a pilot. On the return he is proposing to visit Gardner Canal of which he has heard and which he was persuaded to visit since his visit here.

Mrs. Snyder says she did not mind the waves going over the boat but she objected to the long swell on Queen Charlotte Sound. Both visitors expressed themselves as very pleased with the cruise. Ketchikan was to be their furthest point north but also they hoped to get some fishing in Alaska.

Mrs. Snyder said they walked all over town and they were particularly pleased with the gardens and flowers. The lawns were so green and the homes had an air of prosperity. This was one of the things that particularly pleased her.

The Arro is of the seine boat type 53 feet long and powered with an Enterprise gas engine. She is fitted out very conveniently for cruising and has every convenience for a long trip.

RUSSIAN CROPS ARE A FAILURE

Famine Again Stalks In Land of Soviet But Full Extent Not Known

LONDON, Aug. 11.—(Canadian Press).— Soviet Russia is again faced with famine, says Prof. S. Procopovitch, a well known Russian economist who was a member of the Famine Relief Committee formed in Moscow in 1921, in a communication to the London Times. Professor Procopovitch was a member of Kerenssky Provisional Government in 1917. The Famine Relief Committee in 1921 was dissolved by the Bolshevists, many of its members arrested, and some, including Prof. Procopovitch, were exiled from Russia. The professor writes to the Times as follows:

Soviet Russia is again faced with famine. The south and south east are under the influence of prolonged heat and drought, while the north and northwest are suffering from continuous cold and rainy weather. Under normal conditions this would only result in bad harvest, a calamity which would be merely local, and which, like that of 1891, could be overcome by local means. But now it is otherwise.

Communist Rule

For seven years the country has been under Communist rule. The national revenue has fallen below 40 per cent of its pre war figure. Professor Liaschenko, a well known corn industry expert, writes in a Soviet publication that the cereal harvest per head of the population in Russia was 10.6 cwt. in 1913-14 and 4.7 cwt. in 1920. The year 1920 was the last of a systematic Communist policy. Lenin's partial renouncement of Communism in March, 1921, resulted in an increase of the cultivated area and in the size of the harvest. The extent of this increase we do not, unfortunately, know, as Soviet staticians are wont to increase the figures given them of the area under cultivation by 10, 20, and even 30 per cent. Even Stalin, one of the Triumvirate which at the moment rules Russia, has expressed his disapproval of Soviet staticians on account of their untrustworthiness. This, at all events, is certain, that after the export abroad in 1923-24 of 2,700,000 tons, the population is left almost entirely without a supply of grain.

Wide Region

The failure of harvest in south and south-east Russia is spread over a wide region. According to the Soviet press the harvest has failed completely in many areas. It was found by the expert commission that the local June showers lasted only from 15 to 40 minutes without any change in the temperature, with the result the crops were completely blighted by the sun. The winter crops there have perished completely, while in those districts where they still survive the harvest will not be above that of 1921—i.e., 15-300 lb. per acre. Of the spring crops the fall below the normal will be as much as 50 per cent.

There follows in the same issue another communication from the Northern Caucasus: "In the Saar district, in the north eastern portion of the Stavropol and Terek provinces, and in the whole of the Kisliar region the winter crops have perished and have been cut down as hay."

MAN IS AN OFFSHOOT FROM ANTHROPOID STEM

Common Ancestry of Ape and Man Argued Before British Association at Toronto Today

TORONTO, Aug. 11.—Teeth in three lower jaws of fossil apes recently discovered in the Siwaliks by Barnum Brown of the American Museum of Natural History afford an added confirmation of the common origin of their former owners and the human species. This was shown in the anthropology section of the British Association today by W. K. Gregory, associate professor of paleontology at Columbia University, and Milo Hellman, who went into anatomical details which linked the contour of the newly discovered bones with similar structures in existing apes, and man himself. The fossils are examples of the Dryopitheous type of anthropoids, and the distinctive markings on the lower molar teeth, known as the Dryopitheous Crown pattern, have been traced in detail into the molar crown patterns of each of the existing anthropoids, and also into those of primitive human types. The anterior molar of Dryopitheous falls in between the compressed type exhibited by chimpanzees, and the bicuspids of the human being.

"These facts, in the light of cumulative anatomical evidence for the relatively close relationship of man with the existing anthropoids afford strong support for Darwin's view that man is an offshoot from the anthropoid stem," the scientists decided.

The discoveries also locate on the geological calendar the time at which the distinctively human modifications of dentition took place.

LIFE DEMANDS UPON FAT-SOLUBLE VITAMIN

Constituent of Butter and Cream Necessary to Reproduction and Lactation

TORONTO, Aug. 11. — The average length of life, and success in reproduction and lactation depend on the existence in the body of a sufficient amount of the vitamin known to science under the name, Fat-Soluable A.

This was announced by Prof. H. C. Sherman of Columbia University at a joint symposium on vitamins held by the Chemistry and Physiology sections of the British Association today.

For ten years it has been known that this constituent of butter and cream is essential to growth and the prevention of eye disease, but its importance for other functions has hitherto not been recognized.

The vitamin has been named Fat-Soluble A because it is dissolved by the solutions which dissolve fats.

Lung Diseases

Diets, in which it is present in relatively small amounts, fail utterly to support successful reproduction and lactation, though the individual may be enjoying apparent good health. It is believed, also, that susceptibility to lung disease is due in part at least, to the absence from the diet of sufficient uantities of Fat-Soluble A.

Professor Sherman pointed out that sufficiency of this vitamin in what are considered normal dietaries cannot be taken for granted. Enormous variations may occur in the plant tissues, from which the cows, and in turn, the human beings, obtain their store of this important substance. Measures must be taken to ensure its presence in amounts which provide an adequate sufficiency.

Yours truly, John Smith

ALL the world despises an anonymous letter. We like a man to sign his name to what he writes.

But did you ever think that unknown merchandise is anonymous? Nobody to vouch for it. No name signed.

Notice the advertisements in this paper. There in bold print are the names of those who stake their reputations---stake your good-will towards them on the truth of what they have written.

The maker of advertised goods realizes that he might fool you once---but never the second time. His success is dependent upon your continued confidence in what he says in the advertisements.

Read the advertisements with confidence. They tell truths that you should know.

The measure of satisfaction is larger in advertised products
