As Unconquerable As Russia.

The United States is as unconquerable as Russia but an invader could mess up the ports very badly and do an immense lot of damage to shipping. Canada is in a somewhat similar position. No country but the United States could attack her with much hope of ultimate success and even the experience of the U.S. in the past is not such as to encourage them to repeat the experiment. In fact the feeling between United States and Canada is likely to be such as will preclude any chance of war between the countries.

Because of her impregnable position, President Coolidge suggests that the United States can well lead in the cause of armament limitation. It would be a great advantage to the world if the money now expended in war preparations could be spent in the arts of peace. We all hope that the president's scheme for lessening of armaments will succeed.

Conditions Bad Following Boom In California.

California is no exception to the general rule in regard to booms. The reaction is on there and the people who are not very solidly established are in danger of going to the wall. Working men are suffering from lack of work and inability to earn enough to pay their way out.

It is not that California has not the resources, the natural attraction, the climate, the fruit, the oil and a great many other things that make for wealth. All these things tend to make the place prosperous but when a place is boosted as it was and people flock from every part of the continent and prices go up beyond reach of the common people, then the end is near and the place is due for a fearful slump. It will come back but it will be years before it is again really prosperous.

All Will Regret Illness Of King.

Everyone in Canada will regret the illness of the King. He is the silent figure around which the Empire revolves. The sovereign people govern themselves but they are bound together by a sentimental tie exemplified by the monarchy. With the passing of a monarch a certain amount of uneasiness prevails. Happily the young men who take the monarchy are well trained for the duties ere it falls to them. In spite of the fitness of the Prince of Wales for the position, all will hope that King George may live for many years to carry on the effective work he is doing as nominal head of the Empire.

Mineral Riches Of Interior B.C.

The interior of the province and particularly that part near the line of the Canadian National Railways, is worthy of attention from any who contemplate taking an interest in mining. The series of articles published in this paper are being read with interest as being a careful review of the whole situation insofar as the country in and around the Bulkley Valley is concerned. There are, however, other mining districts in the interior which are not covered by this series. We have mentioned them from time to time. There are the Terrace and Usk districts, the properties at Hazelton and others north from Burns Lake that are well worthy of mention. British Columbia is a mining province and the northern and central portion of the province are at present attracting a great deal of attention from mining men.

"Worth $100 to Me Relieved Eczema and Piles"

Mrs. Peter A. Palmer, Saltburn, Sask., writes:

"Dr. Chase's Ointment has completely relieved me of eczema and piles. I also used this Ointment for my baby, who broke out in eczema. A few applications were all that was necessary in her case. Dr. Chase's Ointment has been worth a hundred dollars to me,—before using it I had spent a great deal more than that in unsuccessful treatment from doctors. We have also used Dr. Chase's other medicines, the Nerve Food having restored my health after suffering from severe nerve trouble when a girl."

Valuable Mining Discoveries in Telkwa Mountains and in Owen Lake and Sibola Districts

(Seventh of Series of Articles on Mining in Bulkley Valley, based on Smithers Board of Trade Report)

Southwest of Telkwa, in the Telkwa Range of mountains, is a large area drained by the Telkwa River and its tributaries. Many valuable discoveries have been made in this region, chiefly in silver-copper ores, though in some veins both gold and lead values are prominent. As long as 1903 locations were made in this section and at one time there was marked activity. In recent years little progress has been made, however, due to inadequate financing, distance from the shipping point, and lack of transportation.

Hunter Basin

Most of the finds have been made in the basins at the heads of the various creeks. Nearest to Telkwa is the Hunter Basin, fifteen miles southwest of the town and reached by a road and trail. Here there have been located a number of silver-copper showings of promise, very high silver values having been obtained on the King, the Colorado, and the Hunter properties. The latter is, like the basin itself, named after the late William Hunter, the pioneer prospector who first located in the basin. This property is now being developed by the owners under the direction of O. A. Reigle, one of them. The latest work, begun in the summer of 1924, is to drive a cross-cut tunnel over 200 feet to cut some showings at depth.

Hankin Basin

Hankin Basin, at the head of the Goat Creek, is about sixteen miles from Telkwa and in it are some of the first claims staked in the district. One has been found with good values in gold, silver and copper, and there is one very large body of low grade silver-copper ore. Little development has taken place in recent years.

Milk Creek

At the head of the North Fork of the Telkwa, in the vicinity of Milk Creek, there are some notable silver-lead finds. These are reached by road and trail from Telkwa, over thirty miles distant. Among the promising claims are the properties of the Chisholm brothers, known as the Big Four, and the Goodwill property, on which there is a large body of gold-silver ore. In 1924 Gillespie & Wilson worked at Milk Creek in the opening up, with good results, of a vein three to eight feet in width showing very high silver content in some assays, also good values in gold, copper and lead.

Howson Basin

At the head of the south fork of the Telkwa, and about thirty miles from the town are the Howson, the Sunset, and the Scallon Creek basins. In this vicinity there was considerable activity some years ago. On the Santa Maria property development work opened up a large body of silver-copper ore, some of high grade. On the Duchess there was established a large body of ore of similar character, but low grade. In Sunset Basin finds were made of silver-copper ore, with some grey copper and some native silver. Work has been at a standstill during the last few years.

Dominion Basin

Further south, in the headwaters of the Morice River, are the Dominion Basin, Starr Creek, and Gabriel Creek. In all of these promising discoveries have been made, chiefly in gold, silver and copper. They are, however, a long way from the railway, and development may be slow.

Silver Queen

About twenty - five miles southwest of Houston, near Owen Lake, is the Silver Queen Group of five crown-granted claims, owned by Dr. H. G. Wrinch, M.L.A., of Hazelton. This is a silver-copper-zinc property with several promising veins. In 1923 the Federal Mining & Smelting Company took an option on the group. They developed the showings continuously until June, 1924, when they closed down all their operations in the district. During that time $7,500 was expended in work, several tunnels driven, and the showings opened up well. Though some distance from the railway this is a likely prospect.

Diamond Belle

Near the Silver Queen is the Diamond Bells Group, owned by J. P. Cole of Houston. Gold, silver, copper and zinc are all important values in this property, which has a number of strong veins. It was under option to the Federal Mining Company with the Silver Queen Group.

There are, in addition to these, a number of other groups of claims in this vicinty with good silver showings.

Peacock

About twelve miles southwest of Houston E. G. Bellicini has a group of claims called the Peacock. Good values are found in gold, silver and copper. The development so far carried on is of a limited nature.

Sibola District

In the Sibola district, near White Sail Lake, about seventy miles southwest of Houston, some remarkable finds in silver have been made. They are a long way from existing transportation facilities but the showings are so good that sooner or later this handicap will be overcome.

Emerald Group

The leading property is the Emerald Group, owned by Wm. Sweeney of Smithers and others. It has been under development for the past ten years by the owners. A vein twenty feet in width and traced on the surface for some fifteen hundred feet shows very high silver values, also a large percentage of lead. Some day this is likely to become a great mine.

Silver Tip

The Silver Tip property between White Sail and Big Eutsuk Lakes is another of the showings in this region well meriting consideration. High values have been obtained in silver, lead and zinc.

When the transportation difficulty has been solved it is safe to prophesy that few fields will equal the Sibola District for silver properties.

HEATING OF CITY HALL DISCUSSED

Proposed to get Two Extra Sections for Present Oil Burning Furnace Boiler

A report from the Board of Works recommending the purchase of two extra sections for the City Hall furnace boiler was sent back to the committee by the council last night for further information.

Ald. Perry explained that the extra sections were deemed necessary in view of the women's jail having been added to the system. With the extra sections, better service would be given with the same amount of fuel. He was unable to say definitely what the cost would be.

Ald. Brown thought there would not be enough radiation to warrant the two new sections, especially, if before the addition of the jail, the present plant was capable of heating the building. He also thought the putting in of the extra sections would be costly.

In referring the matter back to the committee, Mayor Newton said that the present plant was not capable of heating the building adequately in a cold snap. The city engineer had concurred in the recommendation to obtain the extra sections.

REPAIRS OF BOOTH SCHOOL WILL NOT COST SO VERY MUCH

A report from the finance committee that $1,000 be added to the 1925 extraordinary estimates of the school board to cover repairs to the Booth Memorial School was adopted at the meeting of the city council last night. This follows an examination that was made last week of the school jointly by members of the council and school board when it was decided that the condition of the school was not as serious as had been believed and that the making of necessary repairs this year would not involve an expenditure exceeding $1,000.

HIS MASTER'S VOICE

A new Victor product

Album complete with five 12 inch double-sided Red Seal Records $13.00

The Music Arts Library of Victor Records

Just as a certain amount of reading is part of everybody's life experience, so too there is a proportionate amount of music with which every man and woman wishes to be familiar. That is the key-note of the Music Arts Library of Victor Records, the first volume of which is now ready. The Music Arts Library of Victor Records represents a great variety of achievement by the world's greatest artists, and provides a wholly new outlook on the collecting of recorded music. The first volume includes five new double-sided Red Seal Records. Three contain Shubert's "Unfinished Symphony" by Stokowski and the Philadelphia Symphony Orchestra, two the Schumann Quintette by Gabrilowitsch and the Flonzaley Quartet.

Ask the nearest "His Master's Voice" dealer to show you this album, or write us for a descriptive circular.
