IRRIGATES LARGE AREA

The Nile River in Egypt irrigates 5,400,000 acres and this number may be increased to 7,600,000 by engineering improvements.

Reminiscences

By W. J. — and REFLECTIONS

Following a period of scouting and reconnaisance, Generalissimo Berner authorizes the statement that the situation on the fighting front is distinctly discouraging to the enemy Within the past week several severe assaults, directed from elevated positions were repulsed. It may be said, of all ranks, that their morale continues excellent. An early armistice seems practically certain.

Once upon a time a certain type of valentine could mean undeserved suspicion, permanent dislike or an annoying worry. Yet, they sold. Many a sensitive soul, such tripe could reduce to a state of acute misery.

"As soon as the winter weather breaks you will see plenty of activity. Employment will climb rapidly." So says Dr. R. W. Ball of New York, assistant to the vice president of the Celanese Corporation. Only seventeen words, but they mean work and wages and work and wages spell a prosperous Prince Rupert — and so on and so on.

PHONE CONSCIOUS

Canada has 16.5 telephones to every 100 persons, the total representing 3.5 per cent of the world's telephones.

ORANGE LADIES SPONSOR SOCIAL

Members of the Ladies' Orange Benevolent Association were hostesses to Orangemen and their wives at a social which followed the regular monthly meeting of the organization in the Oddfellows' Hall Thursday evening. The period was spent in contests, games and bingo. Winners of the various events were Mrs. N. McLeod, Mrs. George Howe, Mrs. J. Anderson, Mrs. H. Paulson and D. Morrison

While that gathering was enjoying refreshments, Mrs. H. Paulson, worthy mistress of the lodge, cut an attractively decorated Valentine cake. Mr. Morrison, speaking for the men's lodge, thanked the ladies for their hospitality in a brief address.

Committee in charge of the function consisted of Mrs. Fred Barber, convener, Mrs. William Denton, Mrs. J. Feasby, Mrs. F. Ellison and Mrs. C. McIntyre.

60 YEARS OF ACCOMPLISHMENT
1889 1949

The pioneer woman made her own soap. Water seeping through wood ashes in a barrel or piece of hollow log, produced lye. Soap was made by boiling this lye with fat in an iron kettle. In the soap plants of today, soap is made by boiling vegetable oils with caustic soda (lye). Salt is added to cause the excess alkali and by-products to settle to the bottom. Lye and salt corrode most metal vessels. Corrosion affects the color, purity and keeping qualities of soap. So most vessels and containers are made of Nickel alloys. They resist corrosion, last longer, protect the purity and color of the soap.

Nickel Brings Dollars to Canada

Since more than ninety per cent of the Nickel produced in Canada is sold to the United States and other countries, it brings a constant flow of dollars back to Canada. In fact, Canada's Nickel industry is one of our chief sources of U.S. dollars so essential at the present time to maintain our foreign trade and make available products not produced in this country.

These dollars help pay the wages of the 14,000 Nickel employees, and help provide the dollars which make it possible to pay millions in freight to Canadian railways, to buy timber, steel, coal, machinery and supplies amounting to many millions each year.

These millions, flowing into all industries through the length and breadth of Canada, help create jobs for Canadians.
