DAILY NEWSPAPER ADVERTISING IS AN INVESTMENT NOT AN EXPENSE

INVENTS READING MACHINE FOR BLIND—Demonstrating his new reading machine for the blind is young Italian electrical engineer Antonio Rubbiani (right). The machine consists of a photoelectric cell mounted on a framework and placed over the reading material (right center on table). Electric impulses are then transmitted letter by letter to corresponding dowels on the keyboard of the reception box (left center on table), and "read" by the operator using his fingertips. Blind Guiseppe Cerroni (left), the first person to operate the machine, "reads" a newspaper under Rubbiani's guidance.
