MINING NEWS OF HAZELTON.

Another important mining deal in the New Hazelton district this season was completed Thursday afternoon, and as a result Raleigh P. Trimble becomes the owner of the Great Ohio group of eight claims on Rocher de Boule Mountain, and William Sargent and Colin Munro receive \$35,000 in cash and a block of stock when a company is organized. The deal is one of the most important yet pulled off in the district and there is considerable excitement in the camp. It assures another one of the big promising prospects undergoing development immediately. Another pay roll will be established and kept going all winter.

George T. Stewart arrived here Tuesday night after spending the previous ten days on the top of Nine Mile Mountain. He encountered very bad weather conditions but accomplished his work and sent his pack horse back with the first sample of ore

for the Prince Rupert fair. He left on Thursday morning with another horse to bring down the rest of the ore.

The cables were strung across the Hagwilget Canyon this week and now the contractors are working on the bridge proper. Stringing the cables was a big job and especially here where the proper kind of labor is so hard to get. Good progress is also being made on the approaches to the bridge. Engineer Spencer says that with ordinary luck the structure will be ready for use the end of this month.

Frank Martin has completed arrangements for a pack train to go up the White Heather group on Hudson Bay Mountain and bring down the three or four tons of ore he has ready. This is the free silver ore discovered a couple of years ago. Since the discovery Frank has been piling the valuable stuff up as fast as he could

take it out, and he is now in a position to make his first shipment, which will be made from Moricetown through New Hazelton to Prince Rupert and then to the Trail smelter. There is little doubt but that this ore will run \$1,500 to \$2,000 per ton. When the smelter returns are received Frank will be in good shape to continue the work this winter.

William McDonald, Merrysville, was in town this week on business. He stated that he intended doing some more work on his Kitsegukla coal fields this fall, and he would have an exhibit of his coal ready for the Prince Rupert fair.

Duke Harris was in town this week and reported that the boys at the mine would complete the work on the drift at the hundred foot level this week. During the winter the shaft on No. 3 vein will be sunk another hundred feet. They will also continue the work on No. 1 drift until they get under the big shoot of ore shown on the surface, and also resume work on the long tunnel. The winter at the Harris mines will be a busy one in the development line.

George Jennings left this morning for the Highland Boy to move the summer camp down to the timber line and get things ready for the winter work, which will consist mainly of driving a thousand foot crosscut tunnel to tap all four veins and give a depth of about 1,500 feet on one vein. The completion of the government wagon road means everything to all the Rocher de Boule mines. The machinery for this mine is ready to be shipped as soon as the road is passable.—Omineca Herald.

RUPERT GLAZED FISH FOR EASTERN MARKET

Comparatively New Method of Shipping Fish Bound to Prove Great Success.

The Victoria Times of last Wednesday says: Glazed fish is to be shipped in large quantities from Prince Rupert to the eastern markets in a short time. Greer Starrett, manager of the Canadian Fish and Cold Storage Company is now on his way to Chicago, Toronto and other eastern points in connection with the shipping of the glazed article.

The glazing of fish is a comparatively new method of shipping fish. The halibut or salmon, or whatever fish it may be, is dipped into a certain preparation which coats it with a layer of ice. The fish is then wrapped in papers and all is then dropped into the preparation.

In order that the quality of the fish may not suffer while in transit they have to be carried in cold storage plants. The only practical substitute for the refrigerators for the storing of fish is sawdust. The Prince Rupert and Prince George, which are the only ships that have refrigerating plants on board, will be able to handle two carloads in their cold storage plants, which will mean that four carloads will be brought south every week.

The new method of shipping the fish will take a little more time than the former method. The salmon and halibut were frozen in solid ice previously, and shipped in that state to the eastern markets. The glazing has proved a better way of preserving the fish.

BELLA COOLA'S EXHIBIT

Farmers Showing Great Interest in Prince Rupert Fair

The local farmers are showing the greatest interest in the forthcoming exhibition at Prince Rupert, and there remains no doubt that Bella Coola will be represented by a large exhibit.

Mr. A. Hammer, secretary of the local Farmers' Institute, has wired the management of the exhibition at Prince Rupert asking that space be reserved for exhibits, which, according to Mr. Hammer, will be of the highest quality and of miscellaneous character.—Bella Coola Courier.

SALE OF LOTS

AT

PRINCE GEORGE
BRITISH COLUMBIA

SITUATED at the confluence of the Fraser and Nechaco Rivers in Central British Columbia, 450 miles north-east of Vancouver, B.C., and 467 miles east of Prince Rupert, B.C., or midway between Prince Rupert and Edmonton, Alta., on the main line of the Grand Trunk Pacific Railway.

By reason of its central location, Prince George will be the natural distributing point for the extensive territory comprised in the Pacific Province of the Dominion, and it has therefore long been the expectation of the general public that upon the completion of the Grand Trunk Pacific Railway, Prince George will early become a large and important centre.

Having purchased what was known as the Fort George Indian Reserve No. 1 for the purpose of locating a townsite thereon, the Grand Trunk Pacific Development Company Limited has caused the same to be surveyed and platted and will offer lots in this townsite for sale by public auction at Vancouver, British Columbia, Wednesday September 17th, 1913, and at Edmonton, Alberta, Wednesday, September 24th, 1913.

The terms of this sale will be one-quarter cash and the balance payable in one, two and three years with six per cent interest. For further particulars and plans apply to:

Save One Ton of Coal in Every Six

The Economizer will do it.

While the cost of living has undoubtedly been growing greater, at the same time it is true there are some inventions that will offset this increased cost of living, and the careful housewife takes advantage of these inventions.

On every Gurney-Oxford range there is an Economizer which controls not only the drafts but also the entire combustion or burning of fuel to create heat.

This Economizer will save 1 ton of coal in every 6 that you would use with the ordinary range.

The Economizer is a simple device, absolute in its control. By merely moving the lever you can obtain any degree of even heat in the oven. This insures the satisfaction of always having light, delicately crusted bread and biscuits.

The kitchen fire ceases to be a worry if the Economizer is on your stove.

The Gurney-Oxford is the final result of experimental thought. Science has given it a Divided Flue, a new Special Grate, and a Broiler attachment.

This Gurney-Oxford range is primarily a saver of money, time, and energy.
