LIGNITE BRIQUETTES

Winnipeg, June 18.—Professor Ruttan, of the Canadian Advisory Council of Scientific Research, told the convention of the Canadian Manufacturers' Association that the problem of utilizing the vast deposits of lignite coal in Saskatchewan as a source of fuel for Western Canada had practically been solved. As the results of the efforts which had been made by the Research Council, a process had been found which would successfully convert those present lignite deposits into briquette form for fuel purposes at a cost equal to two-thirds of that now paid on the prairies for anthracite coal. "Pound for pound, these briquettes will contain as much heat power as anthracite coal," Professor Ruttan declared.

The professor also stated that Dominion Government had been advised by the Research Council to adopt the process and establish a plant as soon as possible in Saskatchewan to commence operations.
