**H. M. S. MONARCH.**  
 One of England's Superdread-noughts. The Monarch, a North Sea units was built in 1912 and is of the Orton class. She carries ten 13.5-inch guns-four 3-pounders, sixteen 4-inch, three torpedo tubes. Her small view shows two of her formidable looking guns.

day trip to Constania ranch. They have now returned to Aytoun ranch much pleased with their outing.

Mr. J.J. JFfaJJJI, Jprovincial government engineer, left town on Sunday to locate the projected wagon road to connect Bella Coola with the present road leading west from the Cariboo Road. The point of junction will presumably at Tatla Lake. This is an old idea to many of our neighboring settlers, and also to the people of Chilcotin, who have long wished for an outlet to the coast at Bella Coola. Once out of the Bella Coola Valley and the construction of this road will be simple but it seems that those responsible for our road building in the past were not fitted to the task, and knowing this, they never furthered the efforts of the people to secure this through road. It is gratifying to have some little assurance that the long-wished for road to Tatla Lake may be a reality in the course of the next few years.

P. J. Kenyon, Robert Lowe and R. Demorest arrived down from the interior on Sunday last. Mr. Kenyon, who holds the rank of lieutenant in the Legion of Frontiersmen, has wired to his headquarters at Vancouver offering his services with the expeditionary force which it is contemplated that organization will send away shortly. Lieutenant Kenyon is a tried veteran, having served with the colors in both the Matabele and Boer wars, and is a typical type of British cavalryman. His life has been for the most part spent on the frontier and he is no stranger to the hard knocks that invariably come in the course of a pioneering life.

**"Old Fashioned Cleanliness"**

cost our mothers many a "back-breaking" day. The "new fashioned" cleanliness costs only the price of a cake of Sunlight Soap.

This purest of all laundry soaps has a gentle strength that moves dirt quickly without rubbing. And a \$5,000 guarantee proves there is no adulterant or impurity in it to injure the finest fabric or hurt the daintiest hand.

For the thousand and one soap uses around the house—there is just one soap—

**TWENTY MILLION DOLLARS IS FISHERIES INVESTMENT**

**CANADA'S FOOD SUPPLY FROM THIS SOURCE IS VALUED AT THIRTY-THREE MILLION DOLLARS—COMING INDUSTRY ON WEST COAST**

Montreal, Sept. 2.—To say that Canada possesses the most extensive fisheries in the world is no exaggeration; moreover, it is safe to add that the waters in and around Canada contain the principal commercial food fishes in greater abundance than the waters of any other part of the world, comments Mr. A. Johnston, the deputy minister of marine and fisheries in his annual report. The extraordinary fertility of what may be called Canadian waters is abundantly proved by the fact that, apart from salmon, all the lobsters, herring, mackerel and sardines, nearly all the haddock, and many of the cod, hake and pollock landed in Canada are taken from within territorial waters.

The coast line of the Atlantic provinces from the Bay of Fundy to the Straits of Belle Isle, without taking into account the lesser bays and indentations, measures over 5,000 miles; and along this great stretch are to be found innumerable natural harbors and coves, in many of which valuable fish are taken in considerable quantities with little effort.

On the Pacific Coast, the Province of British Columbia, owing to its immense number of islands with its bays and fiords, which form safe and easily accessible harbors, has a seawashed shore of 7,000 miles.

**Most Prolific in World**

Along this shore and within the limits of the territorial waters, there are fish and mammals in greater abundance, probably, than anywhere else in the whole world.

In addition to this immense salt-water fishing area, there are in the numerous lakes no less than 220,000 square miles of fresh water, abundantly stocked with many species of excellent food fishes. In this connection, it may be pointed out that the area of the distinctly Canadian waters of what are known as the Great Lakes—Superior, Huron, Erie and Ontario—forms only one-fifth part of the total area of the larger fresh-water lakes of Canada.

The fisheries of the Atlantic Coast may be divided into two distinct classes: the deep-sea, and the inshore or coastal fisheries.

The deep-sea fishery is pursued in vessels of from 40 to 100 tons, carrying crews of from 12 to 20 men. The fishing grounds worked on are the several banks which

vested in the fisheries amounted to \$24,388,459. Of this sum \$20,442,714 was invested in connection with the sea fisheries, and \$3,945,745 in connection with the inland fisheries.

In 1913 the value of the British Columbia fisheries were \$14,455,488 an increase of \$778,363 over the total of last year.

lie from 20 to 90 miles off the Canadian Coast. The style of fishing is that of "trawling" by hook and line. The bait used is chiefly herring, squid and capelin; and the fish taken are principally cod, haddock, hake, pollock and halibut.

**Inshore Fisheries**

The inshore or coastal fishery is carried on in small boats with crews of from two to three men; also a class of small vessels with crews of from four to seven men. The means of capture employed by boat fishermen are gill-nets, hooks and lines, both hand-line and trawl; and from the shore are operated trap-nets, haul-nets, haul-seines and weirs. The commercial food fishes taken inshore are the cod, haddock, pollock, halibut, herring, mackerel, alewife, shad, smelt, flounder and sardine. The most extensive lobster fishery known is carried on along the whole of the eastern shore of Canada, whilst excellent oyster beds exist in many parts of the Gulf of St. Lawrence notably on the north coast of Prince Edward Island, and in the Northumberland Strait.

The salmon fishery is the predominant one on the Pacific Coast; but a very extensive halibut fishery is carried on in the northern waters of British Columbia in large, well-equipped steamers and vessels. The method of capture is by trawling, dories being used for setting and hauling the lines, as in the Atlantic deep-sea fishery. Herring are in very great abundance on the Pacific Coast, and provide a plentiful supply of bait for the halibut fishery. The fishing industry on this coast is just starting to be developed and with increasing capital being invested many other varieties of fish will become a commercial success.

In the inland lake fisheries, the various means of capture in use are gill-nets, pound-nets, seines and hook-and-line to a great extent. The principal commercial fishes caught are whitefish, trout, pickerel, pike, sturgeon and fresh water herring—the latter in the Great Lakes of Ontario only.

The total marketed value of all kinds of fish, fish products and marine animals taken by Canadian fishermen, from the sea and the inland lakes and rivers during the fiscal year ended March 31st, 1913, amounted to \$33,389,464.

Sea fisheries contributed \$29,-

THE **DAILY NEWS**

IS **SAFE SANE SPICY IMPARTIAL INDEPENDENT INTELLIGENT**

**A NEWSPAPER**  
 for Prince Rupert and Northern B.C.

The Daily News goes into nearly every home in Prince Rupert. It is the popular newspaper of the city because it is clean and reliable. It has all the news of the city, and keeps in touch with events and topics interesting to Northern British Columbia. It treats these subjects with moderate optimism and reliability.

The Daily News is the most valuable paper to advertisers because it is read by the buying public. It has a bigger circulation than any other paper in the city. It is read by the class of people the advertisers want to talk to.
