Storage Batteries

The source of the vital energy in nearly every radio set, is batteries of some kind or other. Not unlike any other machine, a radio receiver, once its vital energy is dissipated, is unable to function properly. Then, in order to ensure a continuous operation of our sets we must see that our batteries are always kept full of energy with which to supply them. In the average radio, using dry B and C batteries, the best thing to do, when these run down, is to purchase new ones. An ordinary 22½ volt B. battery will last for a good many months on the customary three tube receiver, so no anxiety need be felt on this point. Besides they cost so little that we can always afford to stand the cost of a new one or two for the unusual service they give. Buying new A or storage batteries, however would soon break even the very wealthiest of us. It is obvious then that some method must be adopted for recharging them.

Charging Batteries

There are two systems to be considered here. One is to have the battery taken to a service station to be recharged. The other is to charge it yourself. The disadvantages of the first mentioned method are evident. One has to lug the heavy battery to the station two or three times a month or even more, at considerable expense and inconvenience. Then, you are always tempted to drain the last bit of juice from your battery before having it charged, a harmful and serious misuse. Besides this, you are without your battery for a few days every time it has to be charged. Experience shows that this is the most likely time that visitors will choose to hear your radio.

The need for a battery re-energizing device in the home is very clear, then if you desire service, convenience and inexpensiveness. A battery charger may, at first, seem a rather large outlay but it will more than pay for itself in a very short time. There are many excellent charging devices on the market at present, which sell at very reasonable prices. Beware of the unadvertised product, however, when buying one because they will not stand up for any length of time. There are cheap chargers like anything else. Remember this and get a good one.

Caring for the Batteries

After a battery has been used for some time, it will become run down and require recharging. Your battery will in time need watering in order to keep the solution at its proper density. Some of the water has escaped in the process of charging and has thus rendered the solution more concentrated. Ask your service man about this; do not attempt to water your own battery without advice of some sort.

Too much cannot be said upon the proper care of a storage battery, but if it is always kept in a charged condition it will be ready for instant use at any time; its life will be prolonged; and you will not have to turn away friends for the night with the lamented excuse, "I am sorry, my battery is run down."

Special Attention Given to Mail Orders.

It should therefore be tested frequently with a hydrometer, to ascertain the condition of its cells. When the battery becomes run down so that it registers three quarters empty, get it recharged at once. Under no condition should a battery be discharged until it registers empty on the hydrometer. If it should through accident or carelessness however, get into this run down condition by no means absolutely leave it in this state. You are ruining a perfectly good battery by doing so. Either get it charged or charge it yourself immediately. A good plan to follow, if you have a charger of you own, is to charge your battery a few hours per day or even a few hours every other day, so that it may always be maintained in a fully charged state, ready for service. This will prolong your battery life as well.

A corrosion will soon be noticed around the lugs of your battery when it has been recharged a few times. This corrosion takes the form of a greenish paste, which, if left alone, will cause imperfect contact at the lug, and in time eat right through the wires leading from them. The application of vaseline around the lugs themselves will check this action and thus prevent it from spreading. A solution of ammonia and water applied with a rag will serve too, although it will have to be used very frequently. Do not let either the vaseline or the ammonia solution get into the cells themselves or disaster will result. Your battery will in time need

Is your wife wiser than you?

IF YOU read only the stock and sporting pages, and your wife is like other women, she is wiser than you. She reads the shopping news.

She likes to hear you jingle money in your pockets. She likes to stretch money to the limit, so she won't have to ask for more. She likes to shop strategically. Know what she does.

Comfortablv at home in a cushiony armchair, she scans advertising columns. She compares, judges and selects the goods she desires; maps her route; with least effort and minimum time, goes direct to the planned store and buys.

She obtains what she wants at the lowest price it is offered. She is certain of full satisfaction, for she knows advertised goods live up to their claims. She saves time and steps, and returns sufficiently alert to enjoy new advertisements---and to prepare you an appetizing dinner.

These advertisements are written for your benefit too. Read them. Help her help you save.

Buying advertised products is a bond investment----not a stock speculation

Something very novel in the way of entertainment was offered to fans last Friday night, Oct. 24, when the regular Hoot Owl meeting from KGW, the Oregonian newspaper station was rebroadcasted through CFCN at Calgary and KFRC at San Francisco. Listeners in thus had an option of three stations from which they were able to receive the same concert. The Hoot Owls are famous for the excellent brand of entertainment they provide, so that everybody who listened in on that particular night got his full money's worth. It is not known whether this feature will be repeated again or not, but, judging from the success last Friday night, it should be, by all means.

KGO Program

The three-act drama, "Tarnish," by Gilbert Emery, will be presented in audio form by the KGO players, directed by Wilda Wilson Church, in the studio of the General Electric Station, Thursday evening, October 30. Music between acts will be played by the Cremona Trio.

Yerba Buena Lodge, F. & A.M., number 403, Oakland, California will entertain KGO listeners on Saturday evening, November 1, by broadcasting an old time minstrel show.

VALUE OF HATCHERIES SHOWN BY RESULTS IS OPINION OF INSPECTOR

To show the benefits derived from artificial assistance to natural propagation as compared with purely natural propagation, J. W. Harrison, inspector of hatcheries, states that it has been noted on any sockeye spawning in the cycle year following showed about an equal number of fish. Thus two mature fish returned for every pair in the cycle year previous. A mature female sockeye salmon produces about 3400 eggs from which only two fish mature — that is, the return is only 1-17 of one per cent. The return of 6000 fish to McLaughlin Lake from a planting of 150,000 eggs gave a return of 4 per cent of mature fish or 68 times the number produced from purely natural propogation. Thus may be seen the great advantage to be gained by artificial assistance. "If artificial efforts are increased and sensible conservation is enforced, it is an absolute certainty that the industry can be built up to equal if not exceed the production of the best days of the past."

Capt. A. C. H. Gerhardi of the Homestake Mining Co., which is conducting operations at Alice Arm, passed through on the steamer Cardena yesterday afternoon bound for Vancouver.

Buckley's Bronchitis Mixture

Will relieve Bronchitis, Coughs, Colds, Hoarseness, Asthma, and all affections of the Throat, Chest and Bronchial Tubes.

We have a limited number of samples of this Mixture which will be given away to adults only.
