DAILY EDITION

FRIDAY, MARCH 7, 1924.

Editorial Writing Is Being Revived.

There was a time in the history of journalism when the editorial expression of opinion was spoken of as the "leading article" and the person who wrote it was termed the "leader writer." While the former name has disappeared to a large extent the editorial writer is still spoken of as a leader writer.

The editorial was supposed to summarize and explain the most important theme before the public on that day. It was often dealt with at length and sometimes made rather dry reading. With the development of the writing of the news story pick' daffodils in Victoria on the following day.

Within the last few years, however, there has been a revival of interest in editorial writing. The Hearst newspapers and in fact all the popular or yellow press newspapers of the United States are using editorials with good effect.

In order to make the editorial interesting to readers and at the same time instructive, it was found necessary to utilize the best brains of the country. The editorial writers became highly paid men and were enthused with the idea that not only the readers of the one paper read the articles but that a whole syndicate of perhaps hundreds of papers with millions of readers were interested, amused or instructed by the articles which they wrote.

Simple And Interesting But Not Commonplace.

The editorial articles should be simple and interesting but never commonplace. Not only should the ideas expressed be fresh and striking but the method of expression must be such as to appeal to the reader. It should be written in such a way that the reader seems compelled to go on to the end, once he has commenced to read.

In the old days only the learned read editorials. Today an effort is made to appeal to everyone who can read. To do that a separate country, almost as much akin to New Zealand as it is to New Brunswick.

Dizzy Heights

"Just as the Douglas firs grow tall and stately, so do the wonderful sweet peas up the trellis-work of the typical British Columbia bungalow home. The mountains indeed seem to have inspired everything to grow tall; provincial politicos even sometimes have attained to dizzy heights, but that is another story."

INDEPENDENCE MINE AT STEWART ASSAYS WELL: PROSPECTS GOOD

VICTORIA, March 7. — Word has been received from the Independence Mine, in the Stewart district, by Henry C. Hall, K.C., one of the directors of the company in this city, of new and extensive operations in that property, where the latest assays show a value of \$62 per ton, in all values. Although the snow, which is particularly heavy in the district at this time, greatly impedes communication, the company will transport an air compressor to the mine within the next two months. In this way it is estimated that from six to eight feet of tunnelling may be done in a day, where previously only one foot could be accomplished by hand labor.

Jack and Sam Fitzgerald, who have spent fourteen years in the Stewart region, and who are practical and experienced prospectors and miners, have every confidence in the Independence mine, and in their capacity as directors of the company are in a position to know the worth of the property. Both have been working the mine intermittently for the past seven years.

A tunnel at the 3,200 foot level, 180 feet long at the first of the year, will be extended a further 100 feet now that a contract has been let for the work. This tunnel is now almost 300 feet long. At present the mine is following four parallel veins of ore which have at various times of assay shown remarkably good values.

MADE IN CANADA
Royal Yeast Cakes reach the user in sealed air-tight waxed paper wrappers, each cake being wrapped by machinery—not by hand so that even after package has been opened, the cakes are protected from dust and other harmful contamination.

EASTERN VIEW OF WESTERN PROVINCE

Visit of Hon. T. D. Pattullo Caused Editorial Outburst at Ottawa

Picking up an old copy of the Ottawa Citizen from the exchange table the following article met the eye of the editor:

"When the Canadian Club in Ottawa invites the minister of lands of British Columbia, T. D. Pattullo, to give an address on that province, the club is performing a truly Canadian function. Canadians need to learn more about Canada. The best way would be, of course, for Canadians to travel more extensively about Canada, as Americans do in the United States. The next best thing is to meet fellow citizens from other parts of the Dominion and to hear representative spokesmen when opportunities are presented.

Banner Province

The opportunity to learn more about British Columbia should bring out a good attendance of members of the Canadian Club at the luncheon tomorrow. For scenery, there is no doubt about British Columbia being the banner province. For climate, too,

the Pacific coast province can furnish the most wonderful varieties of the development of possibilities of the development of

the waterpowers and the wooded lands suggest possibilities of profit in the pulp and paper industry, or of new lumber kings arising in the far west, as the forests of Ontario and the eastern provinces are denuded. But

there is something far more attractive about the forests of giant Douglas firs than the commercial possibilities of cutting them down. They form an integral part of a beautiful country within the Dominion of Canada—
