Mrs. T. W. Herne arrived from Victoria on the Prince George yesterday afternoon accompanied by Mrs. Marison of London, England, the late Mr. Herne's sister. They will spend a few days visiting here and will return south by way of Jasper.

**FASHIONS & FOIBLES**  
by Shirley Sharon

There is nothing newer than the long blouse worn without a belt and "posed," as the French say, over a narrow slip which also carries the brief sleeves.

If one looks back over fashions that have come and gone, there are a number that stand out as being really beautiful regardless of time and change. The bouffant robe de style, the high-waisted Directoire fashion, the classical simplicity of the tailored suit—and to these one should add the line of the tunic blouse worn over a narrower slip. Paris has just returned to this style, which was one of its most successful pre-war fashions. It is using it for frocks of satin crepe, satin, charmeuse and silk crepe. It is excessively smart.

Father Godfrey sailed on the Prince Prince George last night for Anyox.

FOR SALE.—Fumed oak Davenport. Cost \$85. For quick sale \$45. Phone Blue 704. 222

St. Andrew's Society. The regular monthly meeting will be held on Friday, September 19, at 8 p.m.

The trial of Charles Ryan of Port Simpson charged with the theft of a gas engine is proceeding in the provincial court this afternoon.

The Salvation Army here is asked for information in regard to the whereabouts of James Nicolson, formerly an employee of the G.T.P., as engineer.

**Colored Glass**

So far synthetic production of the emerald, at present one of the most fashionable stones, has failed. The stones on the market are either real stones or ordinary colored glass. The diamond is as refractory as the emerald in this respect; fortunes have been spent in trying to produce artificial diamonds, but the biggest ever created was less than one-hundredth part of one carat. The diamond has, however, a rival which is its equal in brilliancy and lustre, the synthetic white sapphire. The hardness of this stone is, of course, less than that of the diamond; that is why it falls into the sapphire class. The two stones are so alike if mixed together and placed on a tray or table that not even a connoisseur could pick out the real diamonds without applying hardness tests.

Gas, acid, sour, burning stomach, all quickly relieved with Jo-To. All Drug Stores.

**SYNTHETIC GEMS ARE TO BE USED SOON AT BIG SOCIETY EVENTS**

Imitation Stones Are More Perfect Even Than Real: Emerald Cannot be Copied

LONDON, Sept. 18.—Synthetic and imitation precious stones are to make their first appearance as dress ornaments at this season's Courts in London. Gowns will be extensively decorated with them, and chains, bracelets, etc., will be worn to match. They are fairly costly, and can only be used for the most expensive gowns.

Synthetic stones wear like real stones, having the lustre, brilliancy, and hardness of a real sapphire. It will be difficult even for an expert to say if a stone is real or synthetic without examining it by means of the microscope. The only fault these stones have is, paradoxically, that they are of "perfect water," while the real stone has "flaws," or little faults caused through the natural crystallisation. Experiments have been and are still being made in cutting with the object of imitating the "flaws" of the real stone. They have been sufficiently successful to mislead the eye, but the microscope once more detects the imitation.

**Easy Test**

There has been much misuse lately of the term "synthetic," common glass (paste) stones being sold all over the country as synthetic stones. The test is fairly convincing and easy. Sharpen the end of a match and dip the point in cold water; a drop of the water will remain hanging on the point. Now take a watch glass, or any piece of glass, put it flat on the table, and transfer the drop from the match to the glass. It will immediately fall flat. But do the same with a precious stone, and the drop of water will remain in a bulbous shape, like a dewdrop on a leaf.
