DAILY EDITION

FRIDAY, August 7, 1925.

### End Of Nova Scotia Strike.

No doubt the newly elected Conservative government in Nova Scotia will claim credit for the settlement of the coal strike in that province and, in some respects, it may be entitled to it, though the terms of the settlement do not indicate that the new regime is any less "under the thumb" of the British Empire Steel Co. than the old Liberal government was accused of being.

However this may be, it should be a matter of general gratification that the end of the long industrial struggle is in sight and that Cape Breton will soon be busy again at its principal industry. Strikes like these are not good for the morale of the country and certainly do not constitute good advertising for Canada abroad.

### Looks Like An Election Soon.

The date of the federal general election is still uncertain and speculation is rife as to when it will be held. However, the campaign may now be said to be on and it will only need the spark of a definite announcement to intensify it. Arthur Meighen and the Conservatives are already on the stump and so are some of the Liberals. The indications are that the election will be held before there is another session of parliament and it is very likely that Premier King will make an announcement to that effect in the course of the next few days.

### Importance Of Fishing Industry.

While the great agricultural, timber and mining resources of Canada have deservedly received a great deal of publicity, comparatively little has been published regarding the fishing industry in Canada. As a matter of fact, it is the one natural resource which is inexhaustible. It will not be many years before a great tide of immigration will stream into Canada, such as was experienced during the years preceding the great war, and as this continues the available arable land will grow scarcer and scarcer. As the great publishing interests of the United States, especially, continue to use enormous quantities of paper made from Canadian wood pulp, and building activities require an ever-increasing supply of lumber of all kinds Canada must then stand in somewhat the same position which is experienced in the republic today as regards her present limited supply of standing merchantable timber. And perhaps sometime the great silver, gold and copper mines of the Dominion will become depleted of their stores of valuable mineral content.

But in the great fishing banks the supply of edible marine life will be inexhaustible if it is properly conserved. Virgin prairie may become farm lands too high in price to attract the immigrant or in places become valuable city lots, vast tracts of timber may be denuded of their growth and mineral veins may pinch out, but Nature will continue to reproduce her kind in the waters of the deep just as she has always done since Creation.

With the present high cost of living it is surprising that fish is not more popular than it is. However, great change has taken place in the past few years, and while the proportion of fish is but a very small fraction of the meat consumption of this country the progress which has been made is vastly encouraging to those who are interested in the Canadian fishing industry—Commercial and Financial World.

**The "grain of Mustard"**  
**for health**

Don't refuse the mustard when it is passed to you. Cultivate the habit of taking it with meat, especially fat meat. It strengthens the digestion and aids in assimilating your food.

## Victoria, Emperor and Lakeview Mines in Stewart District Are Covered in Government Report

(By G. A. Clothier, Resident Engineer)

The Dandy group consists of four claims — Dandy No. 1, Dandy No. 2, Star No. 1, and Star No. 2—situated north of and adjoining the Dunwell group and east of the Mayflower group. Early in the spring this property was acquired by R. W. Martin and Eastern associates and some work done in the bed of a deep creek cutting across the claims. The work consisted of open-cutting and a crosscut tunnel about 70 feet in length, showing some small mineralized quartz veins and silicified bands bedded with the slate formation.

Later a company was organized called the Victoria Mines, Limited, with a capitalization of \$500,000, divided into 500,000 shares. This company started late in the fall and up to the end of the year a crosscut tunnel had been driven 90 feet with the object of cutting any or all of the north-south series of veins prominent on the Dunwell, and which, according to the prospectus issued by the company, must necessarily extend into the company's ground.

### Emperor Mines

The North Line group includes three mineral claims and two fractions—North Line, North Line Fraction, South Line, South Line Extension, and Flat Fraction—owned by James McKay, of Stewart, and situated north of the Lakeview group. Last year the claims were bonded to Gus Seiffert, who organized the North and South Line Syndicate in Vancouver on a basis of 300 units, of a par value of \$200 a unit. To provide working funds 75 units were disposed of and work was started as early this spring as snow and trail conditions would permit. Under the supervision of Mr. Seiffert a very creditable amount and quality of work has been done this season, making a good start on a promising property.

The trail was put in passable condition from the Lakeview to the camp. Preliminary to starting development work two log cabins were built, one 14 by 44 feet and the other 18 by 34 feet, for mess and bunk houses.

A great deal of surface work was done first in stripping and open-cutting at intervals of from 50 to 100 feet, this indicating a vein of from 7 to 14 feet in width. The vein has a quartz gangue mineralized with galena, zinc-blende, and pyrite.

A crosscut tunnel was driven 120 feet, striking the hanging wall of the vein at a depth of about 85 feet. A cut of 13 feet in length was then driven across the vein without reaching the foot wall. A drift was driven north 40 feet and another 25 feet south, both in the hanging wall of the vein. Both faces were in good ore when work was stopped early in the winter. While the ore on the average is not high grade, it will at least make good milling ore, with the probabilities that there will be shoots of shipping grade ore in it.

Mr. Seiffert has now incorporated the Emperor Mines, Limited, with a capitalization of 4,500,000 shares at \$1 each par value, to take over the property. It is expected there will be no difficulty in proving necessary funds to proceed in the spring on a comprehensive plan of development. A trail will be recommended to the property from the Lakeview or whatever point is most advantageous.

### Lakeview

The Lakeview Mines, Ltd., was incorporated in April of this year, with a capitalization of \$500,000, divided into 500,000 shares. Its holdings consist of the Lakeview group of mineral claims—Lakeview No. 1, Lakeview No. 2, Lakeview No. 3, and the Silver Bell Fraction, staked and owned by James McKay and Chas. Bibeaum, of Stewart; the Lakeview Fraction and an interest in the Riverside No. 4, Riverside No. 2, and Riverside No. 3 Fraction.

The Lakeview group lies east of and adjoining the Dunwell Mines, Limited, ground, and the other claims between the Lakeview group and Glacier creek. Altogether it is ideal ground for operating and shipping, being only about 2 miles from the main wagon road and 5 miles from tide water. The country rock is the Bitter Creek formation, composed of chiefly argillites, talcous rocks, and bands of limestone.

The Lakeview claims have had an extensive amount of pros-

pecting to accommodate fifteen to twenty men, convenient to both the 100-foot and 300-foot levels, was built. A contract for the driving of the tunnel was let, employing six men, and at the end of January, 1925, 140 feet had been driven. It is estimated that the vein will be cut at a distance of 580 feet from the portal and a depth of 330 feet obtained on the dip of the vein.

A power plant is now being taken up on the snow and erected February, 1925, consisting of a 355-cubic-foot (2 drill) Canadian Ingersoll-Rand compressor; 50-60 horse power semi-Diesel, Vickers-Petter engine; receiver, drills, air pipe, rails, fuel oil, etc. The management expects to have it operating early in April. In the meantime the tunnel is being continued by hand and its objective should be reached early in May.

No work has yet been done on the north-south vein. A shaft was sunk 32 feet in ore all the way by former operators. It is the intention of the management to explore this at a later date by driving a crosscut from the north end of the 100-foot level, a distance of 350 feet, which will obtain a vertical depth of 175 feet below the collar of the shaft. This is a very promising vein, showing a splendid grade of ore.

### Ten Years Ago in Prince Rupert

August 7, 1915.

Judge Young has just handed down a decision that crown lands which are under lease by private persons may become liable to be taxed by the municipality for the full value of the land but not for the interest represented by the rental paid.

Children are busily engaged downing flowers in aid of the Red Cross fund and, as a result considerable money has been turned over to the treasurer of the society. The weekly sales are also being well patronized. Yesterday the sale at Parkin & Wards store in charge of Mrs. Shockley and Mrs. Tremayne realized \$74.30.

Work Transferred

This work proved the maintenance to this level of the high values shown in the surface exposures. As no further depth was obtainable in this drift, it was decided to transfer work to a lower crosscut tunnel until a power plant had been installed.

Extensive surface work was also done on the extension of this vein, 300 feet west from the face of the drift. Here the vein was stripped and open-cut for a distance of 100 feet farther west, showing its width to be from 6 to 8 feet. Three samples along the vein gave assay returns as follows: 30 inches wide, 0.115 oz. gold and 60.4 oz. silver to the ton; 48 inches wide, 0.04 oz. gold and 91.5 oz. silver to the ton; the three samples averaging over 25 per cent lead.

In the light of the information gained from this surface and underground work, a crosscut tunnel, three hundred foot level, was started in October. By the middle of November the collar sets were in; a blacksmith shop, powder house, and snowshed had been built; and ore-car, rails, mining supplies, and four months' grub on the ground. A
