Show What Has Been Done Since Last Pre-war Year

(By H. R. McMillan in "Harbor and Shipping)

In order to obtain a more concrete view of the trade growth which Canada has attained during the past decade, This is the regular men's let us review the foreign trade of Canada with Pacific countries, taking the last pre-war year ending March 31, glad to show you other sizes 1914, for comparison with the year ending March 31, 1925. It is obvious that the Pacific coast is the gateway through which the major portion of Canada's trade with these countries would pass, therefore the full significance of the following figures should be noted.

> Pre-War Year Year End-Ending Mar. 31 ing Mar. 31 \$ 4,056,000 Straits Settlements. 231,000 1,645,000 1,709,000

7,838,000 22,046,000 1,473,000 318,000 12,035,000 15,079,000

. \$11,312,000 \$66,199,000 Without giving detailed figures as regards our imports from the abovementioned countries it may suffice to state that the total importations into Canada have grown from \$14,821,000 in 1914 to \$28,423,000 in 1925, just double.

Government statistics regarding Canadian trade with countries other than those bordering the Pacific do not disclose what proportion passes through our Pacific Coast ports, and therefore it is useless quoting figures relating Europe, South America or Africa, but countries has increased since the Panama Canal route became available, as we shall observe when dealing with specific commodities.

NEW MARKET

come into being during the past years and that is the importation in our country, Western Canada. Formerly it was impracticable to bring in merchandise from Europe via the Pacific via the Atlantic Coast and rail across

encouraging condition. In this necessarily brief review of the underlying facts regarding the growth and widening of trade and markets, it has been impossible to d more than show that a real expansion is under way attributable to logics economic cases and not merely an arti

ficial or temporary inflation. Let us now pass to a brief review the development of trade of our prin cipal export commodities, to show

closer aspect what this expansion meant to our industries. GRAIN

The story of our export trade in this staple commedity is confined to the past few years. While there were a few experimental shipments in government ships in 1917, our commercial export of grain did not begin until 1921, during which season we shipped 500,000 bushels. In the five following crop-years shipments have been eight million, 19 million, 54 million, 25 million and 53 million bushels. Shipments up to the record year 1923-24, were made through one elevator of 14 million capacity, but since then our elevators have been added to and the capacity now is six million bushels. The high-pressure record of the 1923-24 season has not been repeated. Despite the fact that we now have greater elevator capacity and more loading berths, less grain has been moved than during the 1923-24 season. This has been due to definite reasons. The 1924 crop was small and market prices were high. The Orient will not buy wheat when prices are high, and thus our shipments to that market fell from 15 millions in the previous season to three million in 1924-25. The following year, the seeson just closed, shipments to the Orient rose again to 20 million bushels. Our total shipments for the past season were, however, restricted from another cause, viz., the heavy damage to the Alberta crop by rain and snow, rendering necessary the drying and re-conditioning of a large proportion of the crop, for which process our facilities at Vancouver were inadequate to permit the movement of as large quantity as would have been the

case had the grain been dry. CAN HANDLE 100,000,000 BUS. Under normal conditions, that is to say, with a crop normal as to quantity. condition and price. Vancouver is now equipped to handle 100 million bushels without undue strain, and there is new in addition the elevator at Prince Rupert which can handle probably 20

to 25 million bushels. established in the Orient, and provided the market price is maintained at con:petitive rates, shipment to that mar-
