Gum-Dipping A Firestone Contribution to

The greatest enemy to tire life is not the chopped-up road, the broken pavement or the harsh grind of rough city streets-but heat, which is created by internal friction. Heat not only weakens the fabric, but also softens the rubber and causes blowouts and tire failures.

Firestone chemists and engineers knew that if they could

find a way to eliminate this destructive heat and internal friction, the mileage-giving qualities of tires would be greatly increased. Such a method was found and called Gum-Dipping." The Gum-Dipping process is one of Firestone's contributions to economize travel-it insulates and impregnates every fibre of every cord with rubber, reducing internal friction and

at the same time binding the cords together by a stronger

union of rubber, thus giving greater strength and flexibility to Firestone dealers everywhere—familiar with Gum-Dipping and its advantages-will gladly explain how thousands of extra miles are built into Firestone tires by this exclusive method. Take advantage of the Gum-Dipping process to lower

your tire costs this year. FIRESTONE TIRE & RUBBER COMPANY OF CANADA, Limited HAMILTON, ONTARIO
