

PAINKILLER
PERRY DAVIS
Sprains — Strains — Bruises

For Sprains and Strains, rub with Painkiller every two hours until pain subsides. Keep injured part at rest. Then wrap bandage soaked in Painkiller around affected part; cover with dry cloth. Renew twice daily until well. For Bruises, raise bruised part if possible. Apply first, cloths wrung out in ice-cold water; change often to keep cold. Then wrap with bandage soaked in Painkiller.

SIR CHARLES HIBBERT TUPPER.

Apart from the fact that in his death has gone one who has been a bright figure for many years in Canadian public life, the passing of Sir Charles Hibbert Tupper is made somewhat more tragic by the fact that his demise has occurred in this the year of Canada's Diamond Jubilee of Confederation of which his noted father, the late Sir Charles Tupper, was one of the Fathers. There are no more of the Fathers of Confederation left and even their sons are now scarce in the land. The younger Sir Charles, who is no more, in great measure followed in the footsteps of the older in the way of service for the public. He was known as an illustrious and upright man and those who were acquainted with him personally or by name, regardless of political denomination, will regret his passing.

When the time comes on July 1 for the noisy and enthusiastic celebration of Canada's national birthday it would be well that serious and solemn occasion be taken to pay fitting tribute to such fathers and sons of Confederation as the revered Sir Charles Tupper and the late lamented Sir Charles Hibbert Tupper. Their memory and the memory of their grand contemporaries will long remain green in the annals of Canadian history.

STILL HOPE FOR CHINA.

The situation in China is indeed disquieting but there is still a good deal of hope to be found in the air. Such a thing as organized warfare seems, happily, to be a still rather far removed eventuality. Policing and not antagonistic military action is China's need today. Indeed there seems no part of the whole of China that could be justly attacked. Present developments and demonstrations there are but an expression of opinion and, as far as the Chinese themselves are concerned, can hardly be taken as overt.

If war ever arises out of the present situation hostilities will be directed against Russia, the soviet government of which is generally conceded to be at the root of the trouble. It is there and not with the Chinese that is to be found the hostile and overt influence.

FORTUNE IN SHAVES.

A quarter of a century ago a safety razor company had a nominal capital of \$5,000. Today the market value of its shares is approximately \$200,000,000. Merely as an industrial phenomenon this capital growth challenges attention.

The growth and expansion of this business were not the result of a monopoly. There were safety razors before this particular make was heard of and at no time during the history of this company was it without competitive razors in wide demand.

Some of the figures of this company are almost staggering. Take the fact that it has sold 3,500,000,000 blades in twenty-five years. This proves there is as much truth as wit in the statement that the disposal of used blades is one of humanity's great unsolved problems.

One reason for the phenomenal success of the safety razor is that it was invented at a most opportune time. Had this genius evolved his famous shaving device when it was the fashion to be bearded, his capital stock might now be worth nothing instead of millions.

Old-timers can recollect the time when barbers looked upon the safety razor with disfavor because there were many men who could not, or feared to, shave with the old style razor. Shaves were then the chief source of income for the barber. Today the barber says he loses money on shaves and urges his customers to shave themselves. Weekly haircuts, massages, shampoos, tonics, lotions, singes and electric treatments, all at higher prices, have placed the barber within the reach of the income tax collector.

TONSILS ARE NECESSARY FOR FULL HEALTH

HAVE DEFINITE PLACE IN HUMAN
ECONOMY AND CAN BE KEPT IN
WORKING CONDITION
EASILY

The tonsils are a very necessary part of your organism "But," you say, "some people live without them." Yes, but some people also live without legs or arms, but that does not prove they are not necessary parts.

The truth is, your tonsils are your friends. They befriend you in many instances, warding off disease, doing some other organ's share of work part of the time, and when they have finally become "sick" from overwork induced by trying to keep you well—the first thought of some people is to cut them out; get rid of them. And there are thousands of instances where tonsillectomies are performed producing throat and kindred troubles, sequelae which are many times worse than the conditions existing before the operation. When human beings begin to seek the cause of their troubles and cease idly-dallying with the effects, health and longevity will be their reward.

The tonsils become swollen and sore from the excessive heat. The vessels are hyperemic, and a vascular exudation occurs into the surrounding tissues, so that the entire throat is greatly swollen. Suppuration of a slight degree occurs within the follicles of the tonsils and gives off a yellowish exudate, which collects upon the inflamed tonsil, forming a patch. At first this exudate appears as small spots, but they soon coalesce, forming patches which may cover the entire tonsil.

Tenderness is traceable from the lower cervical foramen, outward over the skin of the neck to the region over the tonsil, in front of and below the angle of the jaw. Also tenderness is sometimes found from the 13th or 14th intervertebral foramen on the right side, passing outward under the scapula and axilla, and then upward over the breast, beneath the clavicle and along the neck to the region of the tonsil.

The onset is sudden, with chilliness and a rapid rise. There is intense headache and backache, and more or less general aching. The appetite is soon lost, and vomiting of a persistent character may be present. The throat is sore, red and swollen, so that swallowing is painful and avoided as much as possible by the patient. The tongue is coated, the breath has a foul odor and the voice is nasal in character.

There is only one place in the entire body that this energy, technically known to the Chiropractor, can be interfered with in its transmission. That place is a foramina, or little hole, where the nerve cable in branching off from the spinal cord emits from the spine.

There are thirty-one pairs of these holes and they are present at intervals between the vertebrae or individual segments of the spine. This is the way this pressure is produced: These spinal segments, in spite of elaborate precautions Nature has taken to hold them in position by means of muscles, ligaments and cartilages, slip, pull or slowly work out of position, due to the severe strains man exerts on his spine by twisting, pulling, lifting, falling and numerous other movements from childhood until old age.

When the vertebral segments lose their normal position these little holes between the vertebrae are partially closed. This closure brings these sharp, bony, imperfectly formed rings into such a position that pressure is exerted upon the pair of nerves that exist at this point along the spine.

This abnormal pressure interferes with the transmission of energy, and the organs, tissues and cells which are supplied by these nerves are deprived of the amount of nerve energy which Nature intended they should have. Disease is the direct result of this interference.

And here is where your Chiropractor comes in. By carefully palpating your spine he locates the vertebrae which is out of alignment. By exerting a slight pressure with his finger tips over the paths of the nerves affected, he can trace these sore, tender nerves and point to you the statement here made. By a quick, skillful thrust applied to the vertebra he finally accomplishes the return of the segments to its normal position and Nature is again permitted to transmit her forces unobstructed. Normal function of the diseased parts is then resumed and normal health results.

For appointment, phone D. A. McMillan, Palmer Graduate, Room 6 and 7, Exchange Block. Phone No. 691.

FOR BARBERS ONLY

You can always tell a barber by the way he parts his hair. You can always tell a dentist, when you're in a dentist's chair. And even a musician—you can tell him by his touch.

You can always tell a printer—but you cannot tell him much.

POOR SHOOTING.

"Did you put that sign there?" asked the irritated customer, pointing to a card bearing the legend, "We Aim to Please."

"Sure!" said the storekeeper; "that's our motto."

"Huh! You'd better take some time off for target practice."

MIMIC WAR BY NAVAL FLEETS

ATLANTIC AND MEDITERRANEAN
FORCES ENGAGE IN SPRING
EXERCISES OFF GIBRALTAR

LONDON, April 1.—(Canadian Press)—At the end of March the Atlantic Fleet of the British Navy, which has spent the month in tactical exercises with the Mediterranean Fleet off Gibraltar, returns to England. The Atlantic and Mediterranean Fleets are the only British forces including capital ships and the joint exercises provide opportunities to flag and senior officers of handling fleets and squadrons under conditions approximating those of actual battle.

A mimic engagement between the two fleets under battle conditions was one of the main features of the exercise, during which all the numerous phases of marine warfare were gone through. Submarines were used for reporting the movements of an "enemy" fleet, and in the night destroyers, supported by battle-cruisers and cruisers, carried out an attack on the combined battle fleets, screened by remaining destroyers and cruisers.

The naval correspondent of the London Times makes a vivid narrative of a day's experiences on board the Repulse: "Down in the brightly lit submarine tube flat below the waterline the torpedo-tubes are dressed in blue overalls and wearing sea-boots, were standing ready. A gleaming, fish-like monster of steel with its red collision head suspended from rails overhead was hauled over the tube, lowered, and pulled home. The tube door closed, there was a sound of rushing water and someone talked through a telephone. A lever fell, and with a crash and a long-drawn-out hissing of releasing air the intricate machine, some 23 feet long, weighing over a ton, and worth perhaps £3,000 left its tube and sped off into the water to travel for six or seven miles before it came to the surface by its target. It was a competitive firing to test the rate of loading and discharge in battle conditions. In all eight torpedoes were fired, four from submerged and four from above-water tubes.

FULL OF INTEREST

"On deck the scene was full of interest. As each torpedo left the ship one saw the glistening track from the oil in its head lengthening out across a sapphire sea as it sped towards the horizon. Destroyers steamed rapidly down the tracks to recover each one. A seaplane flew over to assist, and within two hours all eight weapons were safely recovered and on board again.

"In the afternoon the cruiser Centaur carried out a firing with her 6-inch guns using our ship as a target; but with her sights so adjusted that the shot fell soft, distance astern, where they were making. The dropping of a couple of depth charges by the Centaur completed the day's program of exercises. She must have been fully two miles distant when they were let go; but the heavy concussion of their explosion sounded for all the world as though our own ship had bumped heavily on submerged wreckage."

"NELL GWYN" GOOD WEEK-END FEATURE

Dorothy Gish Stared in Immortal
True-Life "Fairy Tale"

Of the countless millions of human beings who strut the world's stage, whose names and deeds are cherished a century after they're gone must indeed have been remarkable individuals. Such an individual is Nell Gwyn, whose story will be recorded in picture at the Westholme Theatre tonight and tomorrow.

History, which records wars and political events, often ignores those women whose fame still persists in human memory. Such was Nell Gwyn, a poor orange seller of the London slums, whose beauty and personality elevated her to the position of England's popular comedienne, favorite of the Merry Monarch, King Charles II.

One of the most touching incidents in the picture is the scene where Nell induces the King to convert the vast, beautiful palace he is building as a present to her, into a hospital and home for his war-wrecked soldiers and sailors.

Dorothy Gish, who went to England especially to play the part of Nell Gwyn by Herbert Wilcox, the young English directorial genius responsible for the picture, gives what is said to be one of the greatest dramatic studies yet seen of the tempestuous, brilliant, but good-hearted Nell. Although 250 years have passed since she trod the boards of Drury Lane Theatre, and romped through the great halls of Whitehall Palace, the bells of St. Martin's Church ring out every Thursday, and the great Chelsea Hospital still stands in memory of one of the most remarkable women of all time.

PREVENT FOREST FIRES

You May Lose Your Job If Forest Fires Continue Unchecked

Hundreds of thousands of Canadian men and women depend upon the forests for their livelihood. You may be one of them.

A lighted match, a cigarette butt, thrown down carelessly in the woods, or a campfire left smouldering, may cost you your job. It is up to you; be careful of fire when in the woods.

CHARLES STEWART

Minister of the Interior.

Save Your Forests

LOGICAL

Had ordered some chicken soup in the lunchroom, and having tasted it, said to the waitress: "What is this you have brought me?"

"Deed, sah, dat's chicken soup," was he reply.

"Well, there is no chicken in it."

"No, sah, dere ain't no dog in dog biscuits, either?"

An auto is a necessity when the neighbors have one.

NAVIGABLE WATER PROTECTION ACT.

R.S.C. CHAPTER 115.
MASSETT CANNERS LIMITED, hereby give notice that it has, under Section Seven of the Act, proposed to the Minister of Public Works at Ottawa, and at the office of the District Registrar of the Land Registry District of Prince Rupert, at Prince Rupert, B.C., a description of the site and plans of the wharf and pier proposed to be built on the Massey Indian Reserve, Number One, on Graham Island, Province of British Columbia.

AND TAKE notice that after the expiration of one month from date of the first publication of this notice, Massett Cannery Limited will, under Section Seven of said Act, apply to the Minister of Public Works for his consent in the City of Ottawa, for approval of site and plans, and for leave to construct said wharf and pier.

DATED at Prince Rupert this 26th day of February, 1927.

MASSETT CANNERS LIMITED,
By its Solicitors,
Williams, Manson & Gonzales.

WATER NOTICE

NOTICE IS HEREBY GIVEN that His Honour the Lieutenant-Governor of British Columbia, by and with the advice of His Executive Council, has been pleased to order.

THAT the reservation of the unrecorded waters of Brown's River and McKnight Creek, tributaries of Estal River, established pursuant to Order in Council Number 808 approved the 13th day of January, 1921, be cancelled.

The cancellation of the said reservation will be effective on April 1st, 1927.

DATED this 11th day of March, 1927.

T. D. PATTULLO,
Minister of Lands
