The combined installation was then constructed under a bylaw for \$550,000 and Shawatlans plant went into operation early in 1914.

The construction of the concrete gravity type dam and the pipe line installation at Woodworth Lake left much to be desired and required continuous and increasing costs for patrol and maintenance. The lack of a proper surge tank created heavy surges on the penstock causing failures which proved expensive and in many cases the rupturing of the city water main could be traced to this cause.

Dry Dock Harnessed

The loads continued to increase until in 1925, an agreement was made between the Canadian National Railways, who operate the Prince Rupert Dry Dock, to lease their steam plant of 2,000 k.w. capacity. This eliminated the majorincreasing size of the loads in relation to the generator capacity | Third Avenue -- Prince Rupert, B.C.
