"SLAUGHTER OF TONSILS"

Editor, Daily News.

Permit me to register a protest against the unwarranted slaughter of tonsils and adenoids that is being encouraged by our school authorities. While it is not in my thought to question either the skill or the sincerity of those who are responsible for this type of hyper-active surgical enthusiasm, I can but characterize the present prevailing practice as little less than modern methods of "scientific" mutilation, which demands wholesale condemnation.

Notwithstanding the fact that many of our foremost authorities have declared that the tonsils and adenoids are not present without a purpose, and should not be removed without good cause, there seems to be a widespread furor upon the part of many of the profession to remove these organs upon the slightest pretext.

Now that nature's processes are becoming better known, we find that the throats of our school children are not necessarily the scene of an anatomical bungle in causing such enlargements, but such activity is for the definite purpose of removing toxins from the system, which interfered with by the removal of the tonsils, may produce serious results in later life.

A careful selection of the child's food and the establishment of proper elimination are usually sufficient not only to dispel the tonsil-adenoid bogey but also to dismiss the surgeon. The late Sir William Osler, Canada's greatest physician, said: "Surgery only marks the physician's failure." In no department is the truth of this saying more apparent than among our school children. Operative measures, save in a chronic septic tonsil, is rarely necessary, and in adenoids almost wholly unnecessary.
