AROUND PRINCE RUPERT

British Columbia Mining Now Being Appreciated in East - Big Deal at Alice Arm—John Haathi Busy on Red Reef

While the province of British Columbia has been for many years regarded as one of the Dominion's most promising mineralized areas, full appreciation of the great hidden wealth of this section of the country is only now being shown on the part of the public in Eastern Canada, observes the Financial Counsel published in Montreal. This is chiefly because of the fact that more publicity is now being carried out on behalf of British Columbia, not primarily in the form of propaganda but as a result of actual study and research on the part of leading authorities of the mining world as well as the outstanding successes that have been made by such organizations as Consolidated Mining & Smelting Co., Premier Gold Mines, etc. A large mining share and promotion institution recently completed an extensive physical examination of a number of sections of British Columbia and has prepared a very attractive and informative circular on the subject. Among the points relative to the general mining extension of the province the fact is stressed that British Columbia now boasts the greatest lead-silver-zinc mine in the world—the Sullivan; the largest smelting plant in the British Empire—the Trail plant of the Consolidated; the heaviest producer of copper in the Empire—the Britannia mine; the second largest copper producer in the Empire—the Anox mine, and the most sensational gold-silver dividend payer on the continent—the Premier with distribution of over \$12,000 in dividends within six years.

Some good ore samples are reported to have been taken from the Northern Light property, near the Woodbine and Premier, at Stewart. The Northern Light, financed in Vancouver last winter, is going ahead with surface exploration and diamond drill program. The first hole is drilling and results should be available in the near future. The property is located in a highly mineralized section.

A strike of some importance, which it is suggested may prove a source of customs ore for the Idle Dunell mill has been made on the Mayflower group of claims nearby. The report made by H. P. Gibson of the Mayflower Co., is to the effect that the crosscut tunnel on the Mayflower, driven 100 feet, has cut a deposit of ore at a depth of 60 feet. Assay results have not yet been obtained but the ore appears to be of good grade, showing fairly heavy mineralization with galena and iron pyrites. A drift is being run along the hanging wall side of the vein and is gaining depth in the mountain. A smaller vein about 1000 feet above the present workings has high-grade on the surface. The intention of the company it is stated, is to mine from this vein, which is about two feet wide, and ship the ore. It is hoped that the lower workings will show a sufficiently large body of ore of milling grade to warrant negotiations being opened with the Dunell with a view to putting the ore through the mill on that property.

F. J. Crossland, consulting engineer for the Woodbine Gold Mining Co., has recommended to the directors that a 200-ton mill be constructed on the property. The average value of 900,000 tons of ore which had been blocked out, he said, was about \$20 but, in calculating a total ore value of \$9,000,000 he had conservatively estimated

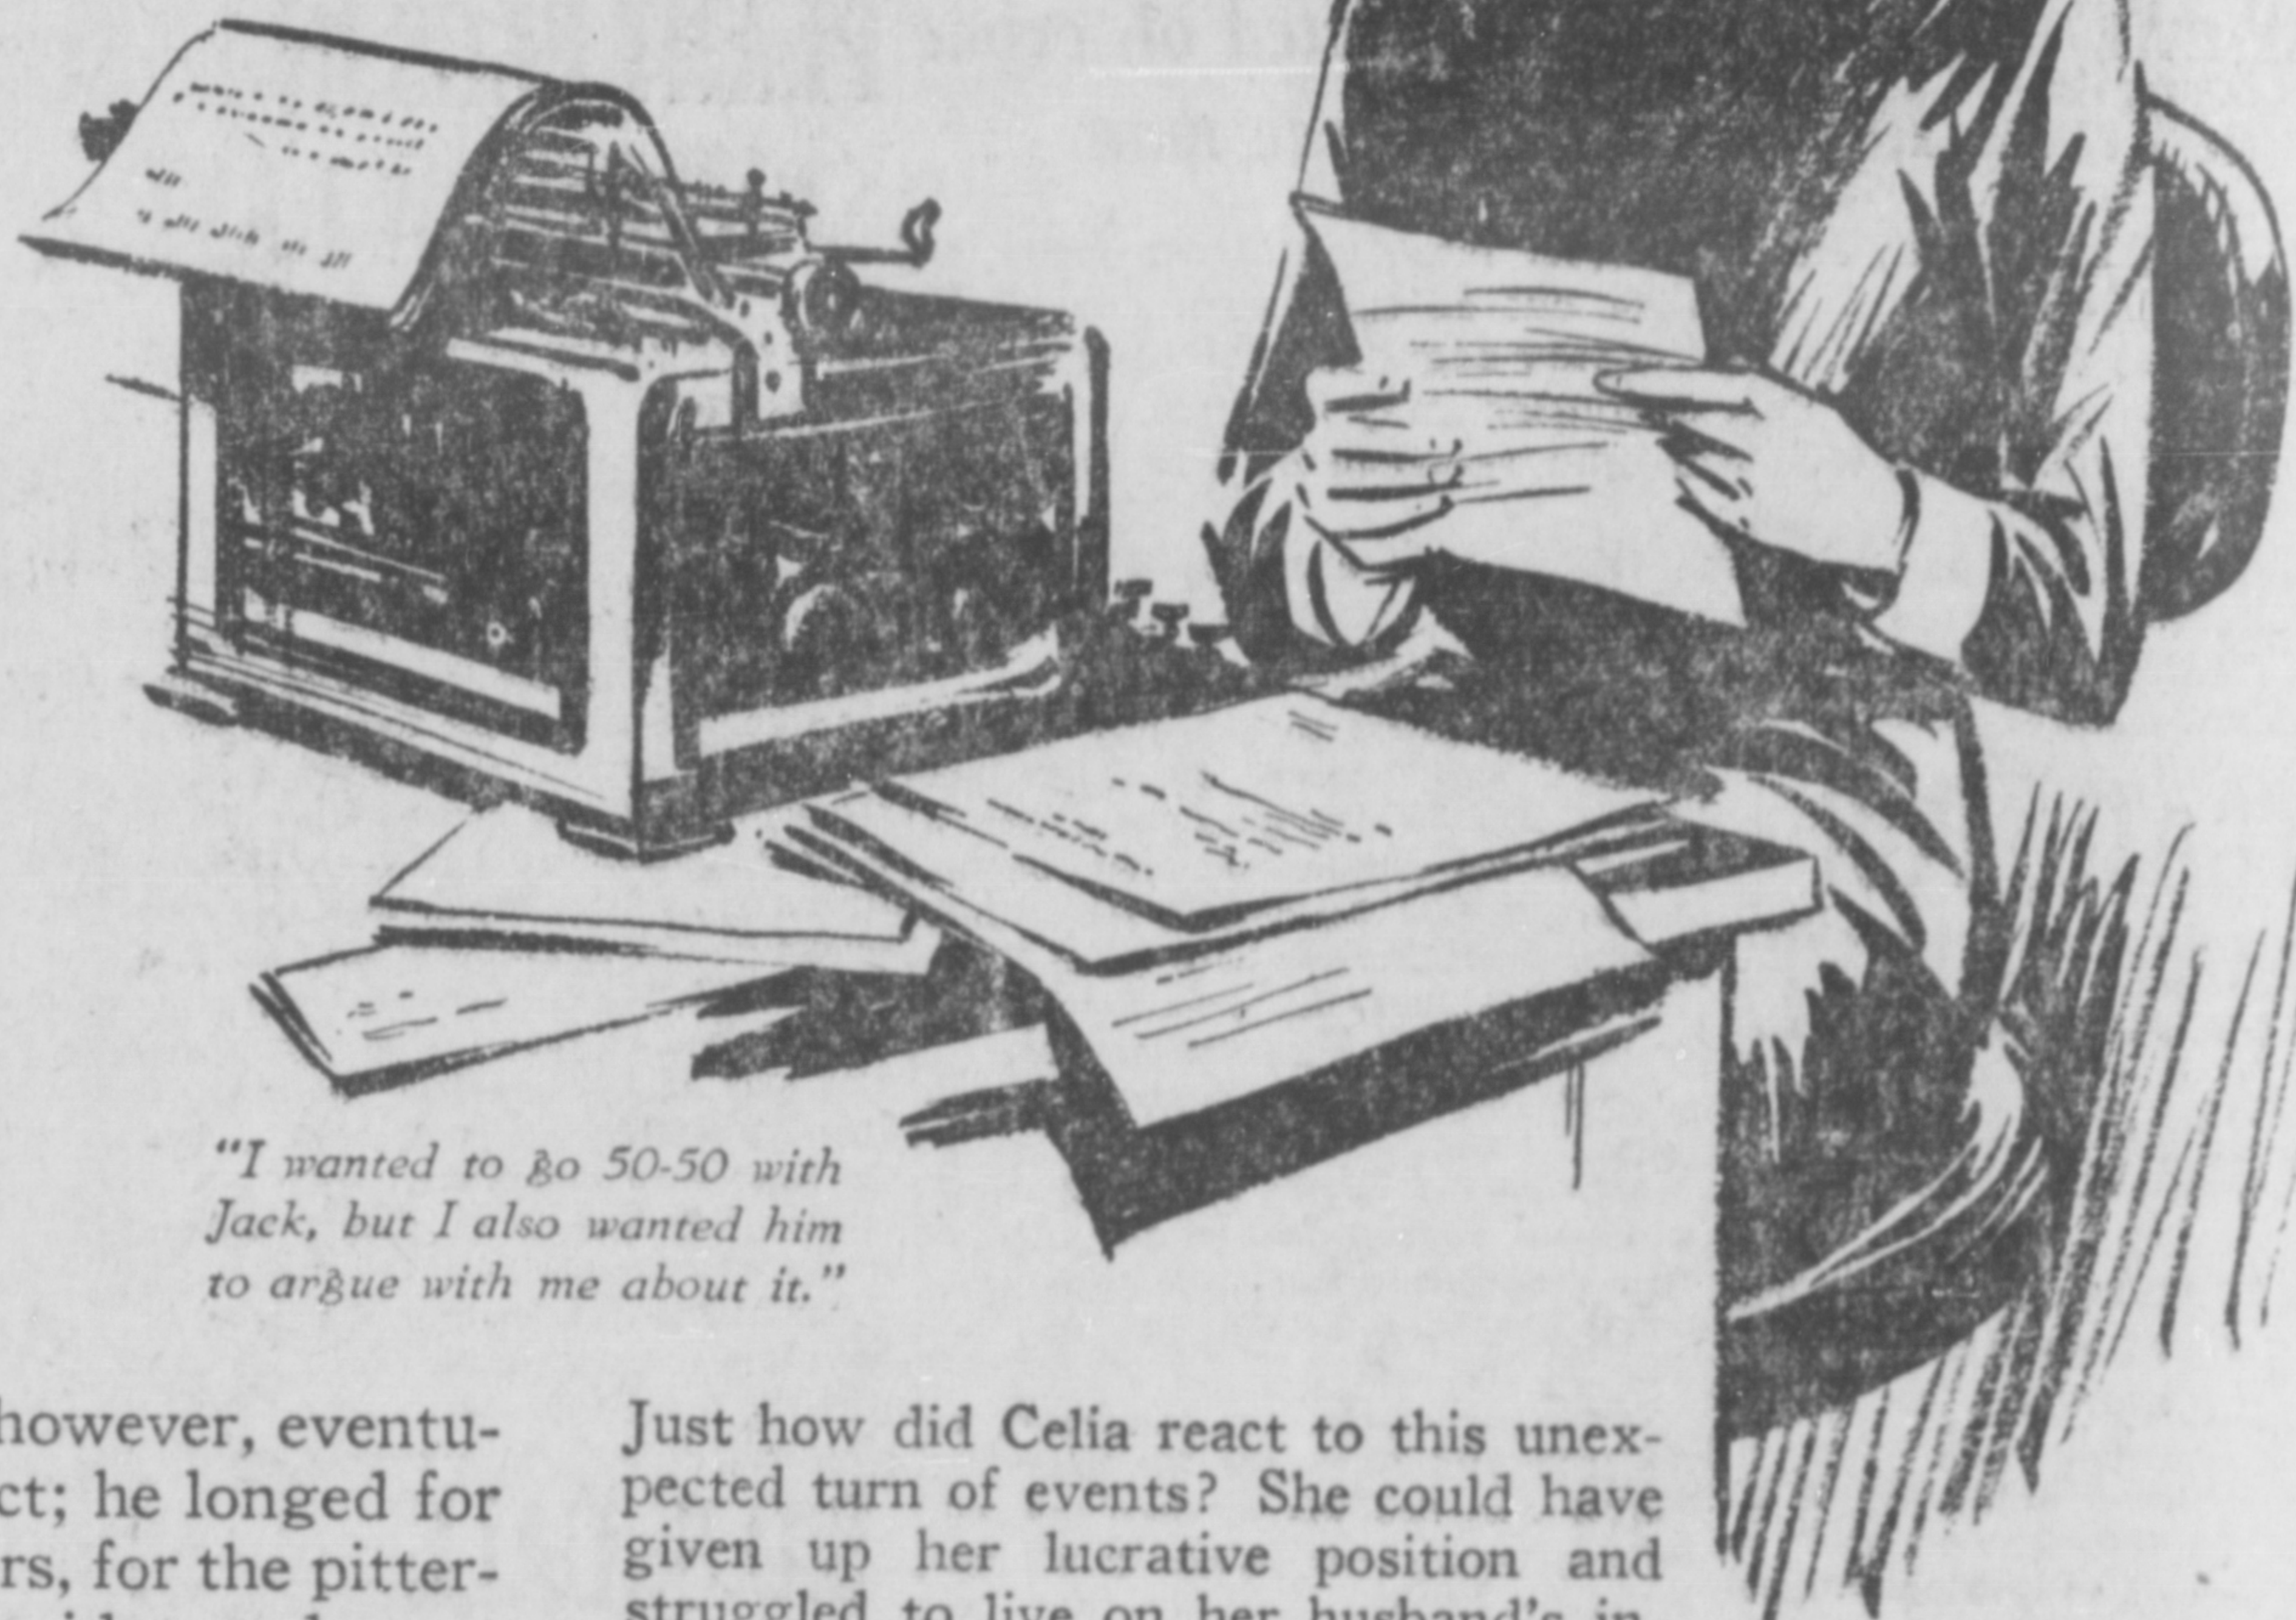

\$10 per ton. W. J. McKee, president of the Northern Light, and A. E. Jukes have been added to the directorate which now includes J. B. Watson, R. Knight, F. Burke, W. A. Tuck (Victoria), Capt. Hutton (London) and A. Campbell and W. Jackson of Winnipeg. Mr. Watson, the president, and a number of these directors, have been paying a visit of inspection to the mine this week. The treasury contains \$113,000 in Dominion government bonds.

The snowline in the upper Bear River Valley back of Stewart has now retreated up to the 2,000 foot elevation, making possible the start of the season's operations on the lower levels, according to official weather reports. Recent warm rains have made for rapid snow disappearance although the season has been late.

Possibly the biggest mining deal ever put through in the Alice Arm district has been consummated in the bonding by the Kitsault-Eagle Silver Mines, Ltd. of twenty claims situated on McGrath Mountain. The bonding price has not yet been made public but a substantial sum is involved and the owners of the various claims are receiving cash payments, the remaining payments being spread over a space of three years. The claims involved are among the richest on McGrath Mountain and the owners include Al Clary, Mrs. W. M. Cummings and M. R. Bernische of Alice Arm as well as the estate of the late G. W. Morley. It is the intention of the Kitsault-Eagle Co. to survey the claims as soon as possible and later in the summer plans will be made for development work. The ore zone containing the claims has been highly praised by Dr. H. T. James, resident mining engineer, and it is expected that the McGrath Mountain section will soon become a big producer of the Alice Arm camp. The properties are situated about three miles from tide-water and conditions are favorable for cheap mining and milling of the ores which carry zinc, lead, silver and gold. The acquisition of these claims now gives the Kitsault-Eagle Co. a total of 55 claims in the district. For the past two years the company has been developing the Silver Cord property with excellent results. This mine adjoins the newly acquired claims and to date a depth of 325 feet has been obtained on the ore body. Crosscutting at present shows the ore to be at least forty feet wide and the hanging wall to the right of the tunnel has not yet been reached. Spectacular specimens of ore taken from a high grade shoot about three feet wide are massive and carry values of zinc, lead, silver and gold. The ore body which shows one hundred feet wide on the surface has been developed on two levels and is possibly the largest known ore body in the Alice Arm district. It was the successful

Should a Girl keep her Job after Marriage

Should she marry a man whose income is less than hers?

"I wanted to go 50-50 with Jack, but I also wanted him to argue with me about it."

CELIA BLUE ran the "Advice to the Lovelorn" column in a Metropolitan Newspaper. She earned a bigger salary than the man she loved. Jack was always hunting for a job. He called his instability "temperament" — in reality it was lack of proper adjustment to his environment. And it was for this reason that Celia insisted that she continue working for the newspaper after their marriage — and that they go 50-50 on all their expenses.

Being a product of the new "environment," Jack lived up to the agreement. But, womanlike, Celia resented his cheerful acquiescence to her own plan. True, she preached the "new freedom" for women in her daily column, but to practice what one preaches is — well — "not being done"!

The monotony of this arrangement, however, eventually awakened Jack's paternal instinct; he longed for the quickening touch of chubby fingers, for the pitter-patter of . . . But Celia flouted the idea and went merrily on her way, dispensing homilies to the lovelorn! The natural desire to protect the "weaker" sex was starved within Jack's manly bosom—so he sought solace elsewhere. Jeannie Mathews was a clinging vine, a frail, timid little soul who needed protection in a wicked city. Jack protected her. And Jeannie thrived under his Platonic protection. To Jack, it was purely a paternal affair, so much so that he told Celia all about little Jeannie!

Just how did Celia react to this unexpected turn of events? She could have given up her lucrative position and struggled to live on her husband's insecure and slender income; she could have sued for divorce; she could have left Jack "flat", for she was independent of him; she could have worked herself into a frenzy of jealous rage. But Celia was far too clever to do any of these things . . . instead . . .

But if you really want to know how Celia solved her own lovelorn problem, read "MEN ARE LIKE THAT" in True Story Magazine for July . . . now on the newsstands. It's originality will surprise and amuse and thrill you!

TRUE STORY MAGAZINE, 64th Street and Broadway, New York City, U.S.A.

I want to take advantage of your special offer. I enclose herewith \$1.00 (one dollar) for which please enter my name on your mailing list to receive (4) issues of TRUE STORY MAGAZINE, beginning with the July number.

(If you prefer to examine the magazine before subscribing, simply mail us 30 cents and we will send you a copy of the July issue at once).

NAME STREET CITY PROV.

BOAT WHICH WAS TO HAVE LOADED GRAIN HERE AT VANCOUVER

According to word received in the city the British steamer Leeds City, which was to have come here this week-end to load grain for the United Kingdom or Continent, has been diverted to Vancouver. Meanwhile, the local elevator management does not know definitely this morning when the final boat for this season here might be expected.

ASSEMBLY IN OTTAWA.

REGINA, June 9.—The Presbyterian General Assembly decided to meet next year in Ottawa.

YESTERDAY'S WHEAT VANCOUVER, June 9.—The price of wheat yesterday was \$1.48 1/2.

development of the Silver Cord that inspired W. G. McMorris, president of the Kitsault-Eagle Silver Mines, Ltd., to acquire control of the adjacent properties. A. McGuire, who has charge of the work, was also instrumental in the deal as well as M. R. Bernische who brought the owners of the claims together and closed the deal on their behalf.

Thomas Robertson, mine manager of the Adanac Mines Co., arrived at Stewart last week taking with him the necessary equipment for the installation of a light tramway to facilitate the driving of a new tunnel on the Lucky Boy extension property in the Fish Creek section, about four miles from Hyder. The tunnel was started last fall and it is the intention to drive it 150 feet into the mountain in order to strike a high-grade ore shoot. It is the intention of the company to work double shifts in order to thoroughly explore this particular piece of ground early this year. Considerable work was

done on the Lucky Boy Extension four or five years ago when a tunnel 150 feet in length was driven and ore was encountered which, on assay, gave very favorable returns. During last year's operations a ton of ore was shipped to Trail, values being shown to about \$96 per ton. Other samples have returned something over \$103 per ton. The Mountain View claim, which immediately adjoins the Lucky Boy, was operated continuously throughout the past winter with three shifts.

John Haathi has had diamond drills working on the Red Reef property at Stewart for the past few weeks. The site selected is within 500 feet of the famous Silverado strike last fall. A new surface strike is described by Mr. Haathi as carrying exceptionally good gold assays over a vein six feet in width. Haathi, picturesque figure of the Portland Canal camp, is confident that the Red Reef carries the same mineralization as he originally discovered in the Silverado.
