Welcome Correspondence

A LETTER from Fisheries Minister Sinclair ad-/ \ vising that early action may be expected on construction of an airport here is the most welcome bit of correspondence for Prince Rupert that the post-office has handled in a long time.

While Mr. Sinclair did not elaborate on details of the investigation which is said to have been made, his note was encouraging in its reference to the importance of this city as a point on the great airlanes of the Pacific area.

Its possibilities in this connection come readily to the imagination. With Prince Rupert as a stopoff, the busy air centre of Edmonton comes within immediate scope of the Orient and this, in turn, opens up still further the travel opportunities for central and eastern Canada.

For flights running north and south, Prince Rupert is in an equally advantageous position. Being almost mid-way between Vancouver and Whitehorse and equally accessible to passengers from Queen Charlotte Islands and the interior, it would be a natural stopping point for planes operating on this route, as well as for those flying to and from Alaska.

A third route that offers promise of much traffic is a triangular one between this city, Prince George and Vancouver. At present there is no flight which in this way serves central, interior and southern British Columbia.

In defence, too, an airport here will make air protection possible that could ward off a threat not only to this strategic port and neighboring coastal points but to inland centres and transportation facilities.

Those who believe that an airfield at Prince Rupert would be inconvenient for normal traffic since it must be located on an island should be reminded that bus- and car-carrying ferries are an established form of transportation in the southern part of the province. Residents of Ladner commute every day to Vancouver by this means. For the inhabitants of Salt Spring Island such a ferry provides the only access to Vancouver, except for air transportation, and the distance involved is much greater than it would be here. Indeed, this kind of service would be far handier than driving along crowded airport road.

It will be noted that Ted Applewhaite, our federal member, is mentioned as having been most active in drawing attention to the advantages of an airport here. The service he is rendering his constituency and the province in this and other ways will be widely appreciated and the contemplated airport would be an admirable standing tribute to his work. Those of the city and region who have campaigned so energetically for this valuable project will receive credit, too, for being alive to the needs of air travel in general and this part of B.C. in particular.

The airport is not a firm promise yet and the campaign must continue. But the prospect of its proving a successful one adds an incentive that should carry us through to the goal we seek.
