BURNS NIGHT IS OBSERVED

St. Andrew's Society Celebrates Occasion With Dinner and Dance

One hundred and twenty-five persons gathered last evening in the Imperial Order, Daughters of the Empire, hall to celebrate the 169th anniversary of the birth of Robbie Burns, Scotland's national bard, at a supper and dance given under the auspices of the local St. Andrew's Society. The event was a great success, enthusiasm was high and the entertainment was apparently enjoyed to the full by all those present.

The tables were laden with all manner of Scotch home cooking in un stinted abundance and, when that course was reached, The Haggis, borne aloft by George Scott, was played in by Piper Hugh Smith to the strains of the old familiar tune "There was a Laddie Born in Kyle." The address to The Haggis was given by A. A. Connon. Following the supper, there was a brief program. The toast to the King was duly observed while that to "The Immortal Memory" was responded to by Rev. J. R. Frizell, honorary chaplain of the Society, who paid high tribute to the memory of the poet thus honored.

Mrs. H. C. Fraser, Mrs. H. N. Brocklesby and J. E. Davey, all in good voice and accompanied by H. N. Brocklesby and W. Vaughan Davies, contributed to the program with solos while A. A. Connon delighted the audience with humorous stories.

During the evening appropriate greetings were received from the St. Andrew's Society at Terrace, which earlier in the day had been communicated with by the local organization. An old time member now in California, W. G. (Scotty) Dennis, was also heard from, his message being accompanied by a wall picture of Robbie Burns as a gift to the local society.

J. S. Irvine, president of the Society, occupied the chair during the evening. In his opening remarks, he welcomed the guests on behalf of the Society and, appropriate to the reunion occasion, quoted verses from "The Cotter's Saturday night."

At the conclusion of the program the tables were cleared and old time dancing was engaged in until 2 a.m., the orchestra comprising John Bremner, James Watt and W. Vaughan Davies.

The committee responsible for the success of the evening's arrangements consisted of Howard Steen, chairman, George Scott, J. McLean, Mrs. John Murray and Mrs. William Thompson. Alex Clapperton presided at the door.

WORK PROCEEDING ON ELEVATOR AT VICTORIA

To be Built on Foundation of Piles and Concrete at Ogden Point Docks

VICTORIA, Jan. 26.—With about fifty workmen toiling industriously and powerful pile drivers and donkey engines beclounding the scene with smoke and steam from exhaust pipes, work is proceeding apace on the construction of the Panama-Pacific Grain Elevator at Ogden Point.

When the piling foundation is completed—in about three weeks' time, it is anticipated—Smith Brothers & Wilson,

for Nervous Headache

The collecting of minerals has venerable traditions in Sweden, and the oldest collection in the world, begun 500 years ago, is to be found in Stockholm at the Royal Academy of Science. The Swedish interest in minerals is based on the fact that the Swedish soil contains inexhaustible reserves of ores. This year several new important ore deposits have been discovered in the Vesterbotten district by State geologists and staked for the crown. Thus, in the last few years, sensational discoveries of new ore deposits have been made in western Lapland, a district now called "Sweden's Klondyke" and found to contain considerable quantities of gold, silver, copper, zinc, arsenic, sulphur and sulphuric ore. The richest of these finds are at the mining centre of Boliden, and big smelting and refining works, the third in size in the world, will now be built at the port of Skelleftea nearby for the purpose of exploiting the Boliden ores.

Ltd., the builders, will probably engage a force of from 150 to 200 workmen to complete the erection of the structure. Half of the shoreward pier warehouse at Ogden Point has been cut away and the main operations at present consist of excavating a huge rectangular hole, 90 feet by seventy feet in dimensions. An industrial clam-shell is doing this work, digging to a depth of eleven feet at the point over which the workhouse will be built, and of six feet throughout the area over which the storage part of the elevator will stand. A total of 2,500 piles will be driven in this rectangle and over them will be laid the concrete floor of the elevator.

While the clam-shell bucket is biting huge mouthfuls of sand and gravel and depositing them in small flat cars to be hauled away and dumped, two pile-drivers are in action at opposite ends of the basin.

The piling will be completed within three weeks, it is expected.

The elevator itself will be completed by September 1, in time for next season's grain trade.

SWEDEN RICH IN ORE BODIES

One Professor Has 5,000 Samples Many of Which, However, Are of no Commercial Value

STOCKHOLM, Sweden, Jan. 26.—The old Swedish mine of Laangbanshyttan in the province of Vermanland in western Sweden has become an international centre for mineralogists from many countries, and according to a recent report has this year yielded new important finds. The mine is situated on an earlier eruptive ground, where the magma of the earth has been thrown up mixed with all kinds of metal ores and other elements, thus producing an abundance of minerals not to be found elsewhere. Professors and students of mineralogy every year assemble here to hunt for new species and are richly rewarded for their labors. Professor Aminoff of the Stockholm University has a collection of 5,000 different ore samples, out of which 500 are, as yet, unnamed. The analysis and examination of these samples is a complicated and difficult procedure, as tiny "inclusions" half a millimeter in thickness, sometimes have to be cut out and microscopically examined, after which they are baptized with quaint names, such as malakite, stalactite, hercynite, margarosantite, rodonite, etc.

BASKETBALL TO RESUME

League Schedule to be Reopened Tomorrow Night — Games With Kinloch Arranged

At a meeting last night, the executive of the Prince Rupert Basketball Association decided to resume the regular league schedule of games tomorrow night. Weather has sufficiently ameliorated now to permit of better comfort for players and spectators in the Exhibition Hall, it was felt.

It was decided to accept the offer of Kinloch for a series of games with Prince Rupert here on January 31 and February 2 on a 75-25 percent basis. Players to represent Prince Rupert were named as follows:

Vic Menzle, Dave Balfour, George Mitchell, Dido Gurvich, Eddie Smith, A. Sicombe, Will Lambie, Spiro Gurvich, Jack McElroy and Clarence Thomson. Lee Dell and Ralph Smith will be joint managers of the local team.

Port Simpson will be offered a game on a similar basis later in February.

SPORT CHAT

Joe Jacobs, manager for Jack Delaney, says that he plans to match the Bridgeport, Conn. heavyweight contender for one bout every week until his quest for a title bout with Gene Tunney is rewarded. Jacobs believes Delaney can keep in better condition by this method than by working out at a training camp. With successive knockout victories over Paul Berlebach, Sully Montgomery and Jack Humbeck under his belt, Delaney will take on Bat Levinsky in Pittsburgh tomorrow night. Negotiations also are under way for a Delaney-Jack Renault bout in St. Louis.

Another "logical contender" went the way of many others when Jack Delaney battered down Jack Humbeck of Belgium in Boston before 12,000 fans. Humbeck was saved from further punishment when the referee stopped the bout in the sixth round of what was

to have been a ten-round fray. When the fight was halted, the big blond Belgian had his right eye closed tightly and was in otherwise no shape to continue. Humbeck was sent to the canvas in the fifth by a wicked right smash to the jaw and after that Delaney scored almost at will, although the Belgian was never completely out of the picture. Humbeck's heavy swings frequently found Delaney's body but seemed to have inflicted no substantial damage.

CADMIUM PRODUCTION RESIDUE FROM ZINC

is Deposited on Aluminum Starting Sheets After Being Re-dissolved

TRAIL, B.C., Jan. 26.—Every year the scientific magicians at the Trail smelter bring forth something new from their box of metallurgical tricks. The past year has witnessed the production on a wholesale scale of the hitherto little-known metal called cadmium. On the basis of production of this very valuable metal in the immediate future, the Consolidated Mining and Metal Company will produce in its plant here one-eighth of the world's total supply. At the present time the world's production is around two tons per day, and cadmium "pencils" bring around 60 cents per pound. The Trail cadmium plant, erected last year and brought in about six weeks ago, will produce 500 to 600 pounds a day.

The production of cadmium here is an offshoot of, or in association with zinc production. The metal is recovered in the last stages of purification of the electrolyte before the zinc is electroplated out, the zinc having in association with it in the residue both cadmium and copper and minute quantities of other minerals. The recovery is by a process very similar to that used for zinc, the cadmium being redissolved and then deposited on aluminum starting sheets.

This metal has extremely valuable commercial uses, most of them in connection with hardening other metals or in connection with its property of giving a hard surface capable of a high polish and being rust-proof.

Cadmium sulphide is also used in making high-class yellow paints.

MANY FAMOUS BORN IN '28

Present Year is Centennial of Birth of Noted People in the World's History

LONDON, Jan. 25.—The year 1928 will have its full share of interesting centenarians, although the birthdays are somewhat outnumbered by the anniversaries of death. Among the former are four distinguished names in literature—John Bunyan (who was born on an uncertain day in November, 1628), Oliver Goldsmith (November 10), Tolstoy (August 28), and George Meredith (February 12). A figure, however, which stands for as much as any of them in the world's history is that of Captain Cook (October 28, 1728).

John Butler, the great surgeon, was born on February 13, 1728, and on April 13, 1828, Mrs. Josephine Butler, who devoted herself to the abolition of the Contagious Diseases Acts. September 3, 1728, was the birthday of Matthew Boulton, the partner at the Soho works, in Birmingham, of James Watt, the inventor of the steam-engine. October 2 is assigned to the birth of the Chevalier d'Éon, a diplomatist of mysterious aura, who flattered through the gossip and memoirs of the eighteenth century, and died in London in 1810.
