

### Cheap Power for Development

For new development work, where cheap power is required without a large capital investment, Diesel Engines make an ideal installation. The investment is comparatively small, the cost of operating is low, and the fuel is easily transported. Many Canadian industries that are not situated close to hydro-electric plants are now using Fairbanks-Morse Diesel Engines with satisfactory results. The Premier Gold Mines are now using over 2,000 h.p., the railway companies use them for their pumping stations, towns and cities rely upon them for pumping and lighting. In fact, Diesel Engines are rapidly coming to the fore as one of the most economical sources of power.

Fairbanks-Morse Diesel Engines are made in sizes for 10 to 25 h.p., Horizontal; and 30 to 840 h.p. Vertical.
