#### The Mineral Province of Western Canada

To the end of December, 1926.

Has produced Minerals as follows: Placer Gold, \$78,018,548; Lode Gold, \$125,972,318; Silver, \$80,787,003; Lead, \$106,976,442; Copper, \$209,967,068; Zinc, \$50,512,5577; Coal and Coke, \$284,599,133; Structural Materials and Miscellaneous Minerals, \$50,175,407; making its mineral production to the end of 1926 show an

AGGREGATE VALUE OF \$988,108,470.

PRODUCTION FOR YEAR ENDING DECEMBER, 1926, \$67,188,842

The Mining Laws of this Province are more liberal and the fees lower than those of any other Province in the Dominion, or any colony in the British Empire.

Mineral locations are granted to discoverers for nominal fees. Absolute Titles are obtained by developing such properties, the security of which is guaranteed by Crown grants.

Full information, together with Mining Reports and Maps, may be obtained gratis by addressing-

> THE HONORABLE THE MINISTER OF MINES. VICTORIA, BRITISH COLUMBIA.

N.B.—Practically all British Columbia Mineral Properties upon which development work has been done are described in some one of the Annual Reports of the Minister of Mines. Those considering mining investments should refer to such reports. They are available without charge on application to the Department of Mines, Victoria, B.C. Reports of the Geological Survey of Canada, Winch Building, Vancouver, are recommended as valuable sources of information.

Reports covering of the Six Mineral Survey Districts are published separately, and are available on application.

IRRITABILITY OF NERVES

Irritability is that property of living protoplasm which causes it to undergo characteristic physical and chemical changes when subjected to certain influences, called irritants. The term irritants, when speaking of nerves, includes anything which causes the nerve-cell to send an impulse along its branches. The irritability of cell-protoplasm is very dependent upon its physical and chemical constitution and even slight alterations of this constitution, such as may be induced by mechanical conditions, may modify the finely adjusted molecular structure upon which the normal response to irritants depends.

Without going into this subject in detail, the fact must be stated that, when a nerve is experimentally subjected to slight pressure, it is found that it will not conduct impulses; when the pressure is removed, it again conducts the impulses. A frog in which the sciatic nerve and gastrocnemius muscle are dissected and prepared, and then connected with an electric current, will show this-When the nerve is stimulated by the current, contractions of the muscle occur; when pressure is brought to bear upon the nerve, the muscular contractions cease; when the pressure is removed and the nerve again electrically existed, the contractions of the muscle again occur; This proves conclusively that the pressure which was applied prevented the conduction of the impulses, for it is the nervous impulses that caused the muscle to contract. It also shows and demonstrates another important fact, namely, that sufficient pressure may be applied to a nerve to prevent it from conducting impulses without destroying the nerve itself, because, in the experiments mentioned, as soon as the pressure was removed, the muscular contractions again occurred.

The above experiment applies to all the organs and glands of the body. Normal nerve supply brings forth normal glandular activity. Chiropractic adjustments restore harmonious nerve function by increasing the elimination of toxic material -Disease; and restoring the assimilative power necessary to the production of good health. Your appointment can be made by telephoning Blue 85, or by calling on
