Fairbanks-Morse Stock Pumps

The Fairbanks-Morse Stock Pump is not just another pump. When Fairbanks-Morse & Co. decided to build a pump for handling wood pulp stock and other fibrous or stringy material, they consulted with Mr. A. B. Wood, an outstanding authority and designer of pumps of this nature. Mr. Wood worked with Fairbanks-Morse engineers and produced a pump that is an improvement on anything heretofore designed or constructed. The new improved stock pump, with its two blade enclosed impeller, will handle, without clogging, fluids containing solids up to one pipe size smaller than the suction opening, and fibrous or stringy material of any consistency that will flow through a pipe line.
