Walker, 194. national Education Board has J. Campbell, 200; D. Smith, made an appropriation to build the telescope, laboratories and A. Donald, 130; W. Mitchell, shops for its operation. The Carnegie Institution of Washington F. G. Pyle, 200; J. Bulger, and the Mount Wilson Observatory are cooperating.

George Waugh, 124; M. M. The present world's largest 7:00-Los Angeles Studio Pro- McLachlan. 200. telescope is the 100-inch reflector J. Strachan, 153; M. Andrews, on Mount Wilson, California. The 200-inch reflector, as large as the floor of a good-sized room, will have four times the power of the 100-inch. For example, the canals 9:30-Moon Magic, KHQ, KGO, J. Campbell, 200; W. Mitchell, of Mars in the new instrument wiill show twice the diameter of the 100-inch images, but this doubled diameter means they have M. Andrews, 200; A. Murray, four times the size and four times

the light. "What we hope to learn with the new telescope," the announcement says, "it should render possible the exploration of many 'island universes' beyond the milky way, the nearest two or three of which are now but slightly knows. It should tell us some-Cricket Match Against Visiting thing about these spiral nebulae, millions of light-years distant, and much about the development of the stars of our own Galactic SYDNEY, Australia, Dec. 20 .system, one of which is the sun By the large margin of eight with its encircling planets. It wickets England today won the should solve many of the problems of physics of chemistry that Australian tour. The aggregate depend upon the enormous mass score of the visiting team was 652 or temperatures, or upon the immense density or extreme tenuity, exhibited by celestial bodies in which titanic experiments exceeding the capacity of any terrestrial laboratory are constantly in progress. Incidentally it should reveal hundreds of millions of stars and hundreds of thousands of nebulae beyond the range of existing tel-

> The present most remote seen nebula is estimated to be at a distance of 100 million light years, a light year being the distance light travels in one year. There are fifty thousand of these nebuae now known. Among the titanic experiments," new light s expected upon Millikan's discovery of rays from space which he identifies as probably from the creation of the elements of which this world and other celestial bodies are made.

A possible axiliary, the announcement says, is a 40-foot Michelson stellar interferometer mounted on the telescope. This instrument measures the diameters of stars. Existing telescopes have just been large enough to permit measurement of a few star diameters, and doubling the capacity via the new instrument opens a field of spectacular pos-

One measurement hoped for is the binary stars, which are two suns close together, revolving about each other. Such measurements are believed to hold one of the secrets of how worlds are

#### PEACE PACT

WASHINGTON, Dec. 18:- The Senate foreign relations committee today voted fourteen to two to report the Kellogg Peace Treaty to the senate.

# Children need

Children need Bovril to fortify them against cold and illness. Bovril is the best of the beef in its most concentrated and digestible form.

The special body-building powers of Bovril are due, partly to the actual nourishment in Bovril itself, and partly to its unique power of enabling the human system to derive far greater nourishment from the ordinary diet. It assists development and increases stamina. Give the children Bovril every day for a month and note the difference.

The Body-building powers of Bovril have been proved by independent investigation to be from 10 to 20 times the amount taken.
