Amounted To Over \$32,000,000 During Year Just Past

A preliminary estimate of the value of the output of the plants of the Consolidated Mining & Smelting Co. of Canada for the year 1929 has been placed at over \$32,000,000 This in an increase of over \$25,500,-000 from the value of this company's output in 1921, which amounted to \$6,836,420, although nearly three millions less than 1928's record production.

Lead leads the list both as to quantity and value with an estimated production of 300,000,000 lbs. valued at \$15,315,000. A new record for production was established in 1928 and at the beginning of 1929 the indications were that this would again be surpassed, but due to an easing up in production, 1929's total was nearly 19,000,000 lbs. less than the preceding year.

The output of zinc was up, although the value of the output, due to a decline in the price of this metal was less. One hundred and produced at a value of \$10,141,450.

Copper Fell Off The noticeable decline in copper production was due to the withdrawal of the Granby output, which resulted in a closing down of the copper smelter and refinery. Nego- Athletic Club. There was a gootiations recently completed, how- attendance and the affair proved ever, has resulted in a routing of very enjoyable. the Granby concentrates to the company's smelter again. The gold output also fell off in consequence of the withdrawal of the copper supply, the gold values being contained in the copper ores.

Cadmium, marketed in quantity for the first time in 1928, produced three-quarters of a million pounds of metal worth \$1 a pound, and bismuth for the first time took its place in the Trail list of commercial metals, over \$300,000 worth being produced.

The market position of lead was improved somewhat and the metal gained around £2 on the per ton price of around £21 in 1928.

Zinc, on the other hand, coninued its decline of recent years, but at a lessened rate, having lost less than £1 from the 1928 average of £25-odd.

Silver more than lost in 1929 the appreciation of 1928.

Production of other metals in order of value were: silver, copper, cadmium, bismuth and gold.

NO ORE FOUND

Churchill, Almost Deserted Once More, Will Awaken in Spring to Influx of Workers

WINNIPEG, Man., Jan. 29: its last lone winter. Except for some 30 men-and a single woman -every, resident at the governmentowned bay port has moved out to the south The last scheduled Muskeg Limited puffed down to The Pas in early December and now the mail is "mushed in" twice a | month by dog team from Gillam at | Mile 327.

Ice-locked, the 250-year-old harbor is deserted until next spring. A skeleton force at Churchill retained by the Hudson Bay Railway, which completed the first laying of steel to the harbor 511 miles northeast of The Pas last March, and by the Department of Railways and Canals. But all railway construction and dock labor is at an end for several months. Three men remain at the government raoffice; the Hudson's Bay Company trading post continues its work; and Rev. H. A. Gibson and his wife recide at the Anglican Mission.

Otherwise the settlement at the mouth of the Churchill River, where 1500 men toiled last summer, is abandoned to the chill winds lashing down from the sea.

In all probability, however, the bay port of the west will never know another so lifeless stretch between autumn and spring. It is certain that the opening of the settlement to the public, planned for next spring, will mark the beginning of a record of at least partially permanent residence at Churchill. Undoubtedly, ingress to the end of the Hudson Bay Railway steel will be closely scanned by the Dominion government; but a new town will begin to take form when the way is opened to prospective settlers.

The fact that harbor construction work is not expected to reach completion until some time in 1931 will not prevent a hurried surge of new citizens to Churchill. As yet, under government ruling, three banking establishments alone have marked the arrival of commerce; numerous applications, however, for permission to set up establishments which might flourish on the trade of hun-Rolston. Contributing to the mu- dreds of residents busy at the har-

When Churchill assumes the status At Tite's store slashing clean-up | Smith, O. J. Hutchings, Ernest of a town, it is expected that these difficulties will have been solved.

Gardens Non-Existent

Moreover, new citizens of Churhill must remember that backyard gardens are non-existent on the barren land about the bay harbor. Fish and other game may roam the frozen muskeg stretches; but staple Trading vessels of the Hudson's Bay vegetables must be imported into Churchill. Radishes, lettuce and potatoes actually were grown at the Churchill as a haven soon after port last summer, and they looked their early voyages. good; but they had imbibed no taste from the barren soil.
