Woodbine Mine Sends Out Test Shipment-Unicorn Looks Promising—Georgia River Gold Closes For Winter

Five hundred pounds of ore has been shipped from the Woodbine mine at Stewart to Salt Lake City for special analysis regarding treatment. The ore will be assayed and reports given to the company recommending the best method of treatment at the mine. The next step contemplated at the mine is the continuation of the shaft to the 150-foot level where it is expected to intersect the gold ore revealed by diamond drilling early in the year. This course of development is favored by the Eastern interests asso-

ciated with the development of "-Woodbine. A heavier pump is to be six feet to cut the vein which had gold content with depth.

Development work on the claims Judging from the results of underof the Unicorn Mining Co. adjoining ground work in No. 3 tunnel, the Big Missouri in the Portland would appear that the contact of Canal district has been going on the porphyry and tuff is favorable apace since early in the year and for mineral deposition and encourresults attained, especially in No. 3 aging results are expected from this tunnel, have more than gratified section of the property. Assuming the management. John Hovland, the strike of the porphyry-tuff conmanager of the company, is now tact continues in the same general spending the Christmas vacation in direction, the Unicorn will have the south but, on his return, the over a mile on the strike of the conwork will be prosecuted with renew- tact. ed vigor and will be continued throughout the winter. Work to date has been more or less concentrated on No. 3 tunnel. On December 1 this year, this tunnel had been perty during the winter months driven a distance of 350 feet. At a over nine miles of trail, Georgia point 170 feet from the portal, the River Gold Mines Ltd. has discon-Big Missouri porphyry cut the tun- tinued operations until next spring. nel on the west side, the porphyry The directors plan to reserve restriking north and south with a sources for resuming of developvertical dip. The formation in the ment as early as possible in the tunnel up to this point is tuff. The spring. Recent development has reporphyry for a distance of 25 feet sulted in the exposure of considis very silicious and slightly miner- erable ore in No. 3 tunnel on the alized with pyrite.
