HE talking motion picture is really the child of the telephone! The efforts to perfect telephone communication naturally led to the study of reproduction and amplification of the human voice, and it is a result of the success of these efforts that the synchronization of sound and picture has become a reality.

So, today, in addition to its activities in connection with radio broadcasting and public address systems, the Northern Electric Company is enabled to contribute still further to the recreation and enjoyment of the Canadian public. This Company manufactures, installs and services the talking picture apparatus, known as the Northern Electric Sound System (Western Electric in U.S.A.), which so rapidly is being adopted by theatres across Canada; nearly 200 already, having been installed in theatres from Halifax to Vancouver.
