AUGSBURG, Germany, May 29:-Prof. August Piccard and Dr. Charles Kipfer, German scientists, are so elated over the results of their 52,000-foot ascent in an aluminum ball that they are already making plans for another similar flight, according to word received here from Switzerland where the pair landed vesterday.

Piccard and Kipfer made sensational discoveries in regard to radio activity from the stars. At an altitude of nine miles, they found the temperature 150 degrees below zero. The earth from there was almost invisible. They brought down samples of the atmosphere at that great altitude for analysis.

New High Records For Silver Lead and Zinc Production in

Hon. W. A. McKenzie, Minister of Mines, has released for distribution his annual report for 1930. This voluminous report covers exhaustively the year's activities in the widespread mining industry of the province and shows clearly its importance to British Columbia. In commenting on the record for the past year, Mr. McKenzie points out

Decries Political Activity Against Him During His Visit to

* POPE MAY CLOSE

Province; Gold Output is Up

that new high record outputs of silver, lead and zinc in part compensated for a decline of 18.8% in the gross value of the mineral produc-

tion—the latter caused mainly by low metal prices and decreased coal

The final figures show a gross value of \$55,391,993 as compared with the 1929 record of \$68,245,443. Notwithstanding an unusually depressed year for the world in general, mining in British Columbia held up remarkably well in 1930 as, in the aggregate, the quantity of metals and minerals produced was the greatest in the history of min-

Gold Development

Of decided interest at this time is the proof with statistics furnished of the growing interest in the development of the gold resources of the province. The production of this precious metal (lode and placer) shows an increase of \$352,681 in 1930 as compared with 1929. This in itself, Mr. McKenzie explains, is American-32,000 pounds, 8.4c. not of outstanding importance but it shows a movement in the right Canadian-56,000 pounds, 6c and direction. He declares that the in-3c, and 6.4c and 3c; holding over, terest in gold, now noted wherever there is a mining industry, is becoming more and more marked in British Columbia. Inquiries as to the gold potentialities of the province are now being received from far and wide. More activity is evidenced in placer-mining, following last year the issuance by the Department of Mines of a bulletin dealing with the placer fields of the Brant, 4,000; Margalice, 5,000, province. In the Cariboo district and Helge H., 11,000, Cold Storage, more leases are being taken up and the Manson and Nation River areas Teeny Milly, 12,000, Atlin, 6c are proving attractive to prospectors; in the latter area reports have Return, 2,500, Royal, 6c and 3c. been received of good ground hav-

Mr. McKenzie refers also to recent developments in connection with the property of the Pioneer Gold Mines Ltd., in the Bridge River district. Everyone, he points out.
