## Play Had Another Good Showing In Church Last Eve

The second presentation of "Melvina's Courtship" in the First United Church went off last evening even better than on the first night. The audience was larger and was very responsive. lections were played by Norman Ireland who is a master of the instrument.

After the play, members of the of Mr. and Mrs. Frank Vickers.

# WHEN CHILDREN PY

HILDREN often cry for no apparent reason. Many times we can't guess what is wrong. The crying may mean a touch of colic; the little bowels may be sluggish-or some other upset. It may mean any of the common little ailments that children suffer. To bring quick comfort to your little one, give a few drops of Castoria. Most upsets of children are soon soothed away by this pleasanttasting remedy that children all love.

In five million modern homes, Castoria is a mother's first thought when a child is out of sorts, feverish, cross, doesn't eat right or sleep right. When bad breath, coated tongue, or languor tells of constipation. These five million wise mothers know that children should never be given stronger medicines meant for the fully developed systems of grown-ups. Castoria is gentle-safe, yet always thorough and effective for a child of any age. It may be given to the tiniest infant for any little upset. When buying, look for the signature of Chas. H. Fletcher on wrapper.

### MARK SITE OFFURNACE

Historical Monuments Board Expected to Commemorate Efforts to Establish Blast. Industry

BROOKVILLE, Ont., February 28: The Historie Sizes and Monuments Board has, after preliminary investigation, placed upon the agenda for its next meeting, the question of designating the site of Lyndhurst (formerly Furnace Falls), in Leeds County, of what is generally agreed to be the first blast furnace for iron that was established in Upper Canada. It was on Sept. 13, 1800, so General Cruikshank, the chairman of the board has discovered, that a certain Wallace Sunderlin (some-50 times referred to as "Captain") 3.00 of the province asking permission pectations of those who launched it. \$6.00 the "Gannanockway" (Gananoque) tles were cast for the use of the 9.00 River. These works were to include settlers, but these are said to have 1.40 and other furnace ware that shall returned to Vermont. The remain-.02 te necessary for the use of people ing partners allowed the iron works

The council appears readily to have acquiesced in the sugges- ST. DAVID'S sion he sought (with the provision that the works were to be completed within the specified time or forfeited without compensation) and the Surveyor-General was instructed to appropriate 2400 acres of land where Sunderlin should designate, of which 1200 acres were to be his when the conditions were performed. Thus was born Upper

Canada's first iron furnace. Sunderlin made haste to fulfill the conditions imposed. By November, 1801, so Dr. Solomon Jones, an early magistrate and judge of the Johnstown District Court, informed Chief Justice Elmsley, he had erected the iron-works and "a good sawmill" and had built " a good Moreover, Dr. Jones reported that he had seen the forge that had been opened and "two for the guests. bars of iron manufactured which appeared to be of good quality" and considerable quantity of "coal wood made into Pitts and burnt into coal." From this it may be judged how primitive were the methods Sunderlin employed.

Ore Used

At the same time the originator of the scheme was joined by Ephraim Jones, one of the most prominent Loyalist settlers in Augusta township and an early member of parliament, who also invested a sum of money, and at a later period Bradley Barlow of Fairfield. The ore used is described as "scaly red" hematite of inferior quality and limited quantity obtained on lot 25 in the tenth concession of Bastard township. It had to be

# B.T.U. DEFEATS JACK FROST

PON the cosy warmth of your home during the winter months, the good health of your family largely depends. Similarly, the amount of heat you can maintain is dependent upon the coal you use and the manner in which you fire your furnace.

It is a simple matter to determine the coal with the highest heat value. Science makes it possible for you to know without doubt that certain coals contain as high as 13,000 B.T.U.'s or heat units to the pound . . . and that others contain only 10,000 or lower.

Any Combustion Engineer will tell you that Nanaimo-Wellington or Comox Coal from the rich bituminous seams in the Vancouver Island field, show an average of 13,050 B.T.U.'s or better.
