### Sleepless NERVES

The nerves themselves never sleep. The involuntary nerves must work all the time or the vital organs would cease to function. It is only when supplied with nerve force that the heart beats, the lungs breathe, and the other vital organs perform their natural functions.

The unfortunate condition is when you cannot sleep. The weak, irritated nerves will not let you rest. So day by day you are losing vital energy until sooner or later must come a nervous breakdown. Sleeplessness and headache are the

warning signs when the nerves go

wrong. You may also have indi-

gestion and feelings of fatigue. All the vital organs sooner or later slow up, when nerve force is lacking. The most certain restorative for the nerves is Dr. Chase's Nerve Food. It has proven its effect in so many thousands of cases that there is no question of its merits.
