# How to Escape FLU and Grippe

1 Avoid so far as possible the places where germs are most likely to be spread; overcrowded cars and public meeting places; overheated, stuffy rooms.

2 Be careful of close contact with others and beware of all coughers and sneezers; breathe through the nose, get fresh air, but avoid drafts or chilling.

3 Get lots of rest. Drink plenty of water. Keep the bowels open. Take extra precaution to keep in good physical condition, so your system will have normal resistance against germs.

4 Try, particularly, to avoid catching cold. Colds lower your resistance to disease germs. At the first sign of any cold, take some Aspirin; remain indoors if possible until your cold is gone. And if you have a sore throat, dissolve three Aspirin tablets in a quarter glassful of water and gargle; this relieves the soreness, and usually reduces the inflammation.

5 If you have any reason to suspect even a touch of flu, call your doctor at once.

## A Service Valued For Its Dependability

The prescription your doctor writes for you is your ticket to health. It should be filled with fresh, full strength drugs by pharmacists who know their profession. That is the reason, nine times out of ten, your doctor will advise you to come here with prescriptions.
