#### Whipping Nestle's Evaporated Milk

The Nestlé's Evaporated Milk must be well chilled (below 50°F.) but should not be diluted. If it is scalded before it is chilled, it whips more readily and is somewhat stiffer.

TO SCALD Nestlé's Evaporated Milk, several cans may be prepared at once, by covering them with cold water, bringing to a boil and boiling for minutes.

CHILLING Nestlé's Evaporated Milk is quickly brought about by pouring it into a freezing tray in your electric refrigerator and leaving for about five minutes. If not convenient to use a freezing tray, to chill the milk, pour it into a bowl surrounded by chipped ice and salt. Whip the milk rapidly. It will not "turn to many times it is whipped. Nestle's Evaporated Milk, when whipped, ncreases in volume about three times.
