Are a Guide to Value
Experts can roughly estimate the value of a product by looking at it. More accurately, by handling and examining it. Its appearance, its texture, the "feel" and balance of it all mean something to their trained eyes and fingers.
But no one person can be an expert on steel, brass, wood, leather, foodstuffs, fabrics, and all of the materials that make up a list of personal purchases. And even experts are fooled, sometimes, by concealed flaws and imperfections.
There is a surer index of value than the senses of sight and touch . . . knowledge of the maker's name and for what it stands. Here is the most certain method, except that of actual use, for judging the value of any manufactured goods. Here is the only guarantee against careless workmanship, or the use of shoddy materials.
This is one important reason why it pays to read advertisements and to buy advertised goods. The product that is advertised is worthy of your confidence.
Merchandise Must be Good or it Could Not be Consistently Advertised. Buy advertised Goods.
