## "There'll Always Be An England" - - -

The song that has become so popular throughout the English speaking world as a result of the wonderful recovery at Dunkirk followed by the brutal attacks of Hitler on the women and children of the southern section of the island of Great Britain was written in the spring of March 1939 and was a flop. There was a little too much gush about it. It seems like "laying it on too thick" for the staid people of England. Copies of the song were put on the top shelf of the music shops out of reach.

Then came the war and people realized they were fighting for freedom. But it was not until the evacuation of Dunkirk drew the eyes of the world to Britain as the only country left that could save democracy from the brutal rule of Hitler that the sentiment expressed in the song became the sentiment of the English speaking world and the English defence forces became heroes. So today everybody sings:

"There'll always be an England  
While there's a country lane,  
Wherever there's a cottage small  
Beside a field of grain.

"There'll always be an England,  
And England shall be free  
If England means as much to you  
As England means to me."

This is the song that Canadians sing as they land in a British port. It is the song that Australian and South Africans sing when they catch sight of English shores. It is sung in the United States. It was the last song of the little boys and girls who had just left their native land and who were drowned by the Nazi terrorists. They stood on the deck and sang those words just as the ship on which they were crossing to Canada sank beneath the waves. It is a song that will live for many a year because it expresses the faith of a great people.

England seems to have borne the brunt of the German attack so there is no need to apologize for the singing out of that country by the song writer any more than there was for the singing of "Tipperary" in the previous war. Today, England has become the symbol of unexampled bravery in resisting attempted oppression and, from that resistance, will spring the suppression of Hitler and all that for which he stands. When we sing "There'll always be an England" we mean that there will always remain somewhere in the world that spirit which will overcome evil no matter how one-sided may seem the fight.

## HINTS TO TRAPPERS

Means Of Capturing Predatory Animals Are Elucidated

(Tyrgarn Mulvany)

Members of the Tweedsmuir Park Rod and Gun Club have been favored by the receipt of a valuable bulletin on the trapping of predatory animals from the B. C. Game Association.

The article, originally written by R. K. Stewart, chief predatory animal hunter for Alaska, has been revised and abbreviated but is commendable for its sound advice from one who has made it a life study. Too lengthy to reproduce in its entirety, a few of the most valuable points may be absorbed by the trapper, hunter and prospector for the damage to game, especially deer and moose, is annually becoming greater. The old trappers may laugh and the old prospector tell about the one he shot in 1890 but the fact remains that, in spite of the \$15 bounty, there are comparatively few wolves brought in.

Quoting from the bulletin the article on "Equipment" reads as follows: Any of the standard makes of No. 3 spring (double) traps are recommended for coyotes. The No. 14 Newhouse is the only trap suitable for wolves in Alaska. The No. 4 Newhouse may be used for wolves but is not so good.

A kit of the following articles has been found by experience to be the most suitable and should be used at all times:

One piece of canvas three feet square, 1 garden trowel, 1 small prospector's pick, one hand-axe, 1 pair pliers, 1 can, about the size of a one pound coffee can with the bottom punched full of holes for use as a sieve, trap covers of canvas to fit inside jaws of traps, with slit cut for trigger, and long enough to go over the trigger-jaw and under the loose jaw, some strong pliable wire, pegs or drag hooks for traps, a one gallon can or large basket with lid in which to carry dry fine earth, a scent kit consisting of at least two kinds of scent, a bottle for receiving gall and anal glands from trapped animals, a container in which to carry absorbent cotton and droppings of coyotes and wolves (those of a dog may be used but are not so good) and gloves which are used for no other

purpose than for setting traps. This portion goes on but as it contains much that is known to every trapper worthy of the name.

Mr. Stewart's comments on "Appeal to Animal Curiosity" are worthy of any trapper's attention. In preparing scent an appeal should be made to the curiosity of the animal rather than to its hunger. By doing this, the more an animal is getting to eat, the more thoroughly may its curiosity be aroused. Two distinct appeals may be made—one through the animal appeal as with the scent made from the secretions and glands of the species and the other through the inquisitiveness of the animal by a scent having a fetid basis. A number of variations may be made in either class and at times the two may be combined although inadvisable in ordinary practice. The following scents, No. 1 and 2, are excellent formulae, one of each kind:

#### Scent For Coyotes

Musk scent for coyotes: One half pint of glycerine containing one grain of corrosive sublimate, one-half dram of zinc valerianate, fourth dram of Tonquin musk (Siberian), one-half dram Civet musk, one-half dram beaver castor, finely ground. Add three times this amount of thoroughly rotted fish oil, or rotted caribou or moose brains, or add equal amount of gall and anal glands of coyotes and twice the amount of their urine. Thicken to paste with flour.

Animal scent for coyotes and wolves: One-half pint of glycerine containing one grain of corrosive sublimate to the ounce, one-half dram zinc valerianate. Add equal amount of gall and anal glands of wolf and twice the amount of their urine. Anal glands are situated just under the skin on either side of the anus. For coyotes use their secretions in the same proportion. Saturate a cotton swab (like a throat swab) and place near the set. Re-scent on next visit by dipping the same swab. Then it is good for one to three weeks, depending on the wind and rain which washes away the scent.

Mr. Stewart goes on with a rolling, the banks of ravines, rock-number of valuable hints and his slides, etc. They select a point paragraph on "Places for Sets" is from one hundred to eight hundred yards distant on which to lie and watch the den for approach of danger. In den hunting it is generally found that the den itself or its immediate surroundings are in view. It will often be situated under a hardpan or blanket of rock or hard formation and at times among the roots of a wind-swept ridge. Choose a den year after

year if undisturbed. In rare cases one of the female pups will have her first family in the parents' den with another litter by her mother. If there is a dog the parent coyote will try to get it to chase her in a direction away from the den.

Scratching point" of coyotes or wolves if possible or against a low object such as a piece of bark or a bunch of grass. The latter is best when there is much snow. On snow sets Mr. Stewart states: Snow is very porous and will not exclude the odor of steel. Snow and ice sets require special care. The following method has given good results wherever used since it was introduced: use the kit described in the equipment list but carry the light earth, as from the roots of windfalls, etc. which, as the Game Department has it, contains much "humorous matter." No doubt Mr. Stewart had it as "humus" matter.

#### Valuable Don't's

The Bulletin quotes some valuable "Don't's."

Never use tobacco along the trap-line.

Never expectorate near the set.

Never take traps or trap-kit into living quarters.

Never go up to sets unless necessary.

Never forget that you cannot be quite careful enough.

Don't use paraffin in the hot tea dip for traps for snow set. It makes them spring too easily.

Never leave an abrupt edge of snow about the set.

Never leave a smear of dirt on the snow.

On den hunting the following may be found informative:

If the location of fox dens is known they may be visited in denning time to see if coyotes or wolves are using them. If not the den should be undisturbed. Wolves breed sometimes in January but mostly in February and coyotes about two or three weeks later.

The period of gestation is nine weeks. Most of the pups are born in April though some come earlier and some later. No doubt there is some variation due to climate and in some sections the heaviest pupping comes in May. Both Savoy Swingers and Big Sisters

## Woman Engineer Lucky For Ship

Named After Queen Victoria She Helped Dodge Fighting Plane

NORFOLK, Va., Oct. 26: (CP)—Victoria Alexandria Drummond, named after the late Queen Victoria, helped bring the Panamanian steamer Bonita safely through three German warplane attacks on a recent voyage across the Atlantic.

She is second engineer on the vessel which weathered the Nazi onslaughts with no greater damage than shattered porthole glasses and machine gun bullet scars.

## Canada At War 25 Years Ago

Oct. 26, 1915—French troops on the Western Front captured "The Curtain," strong German position north of Mesnil in the Champagne. Venice bombed by Austrian airmen. Allied troops advanced to the aid of Serbs in southern Serbia.

## PREPARING TO COUNT BIG VOTE

How Popular Vote Was Distributed Four Years Ago

NEW YORK, Oct. 26: (CP)—Election machinery in the States is being prepared for the prediction of a total vote 5 as high as or higher than total of 5,646,817 in the presidential election, which is an all-time high.

In the 1936 election the craze, led by Franklin D. Roosevelt, who was seeking his second term in the White House, was a smashing victory, carrying votes in the electoral college against eight for the Republicans who were led by Alf Landon, former governor of Kansas, who scored a majority in the late vote in only two states, New York and Vermont. Maine has five electoral college votes and Vermont three.

The Democrats polled 27.4 million votes in the presidential election against 16,679,583 for Landon, 1,490,561 for the other candidates—Union, Socialist, Communist, Prohibition and the like.

The following table shows the popular vote was distributed four years ago:

Alabama	238,196
Arizona	86,722
Arkansas	146,765
California	1,766,836
Colorado	295,021
Connecticut	382,189
Delaware	69,702
Florida	249,117
Georgia	255,364
Idaho	125,683
Illinois	2,282,999
Indiana	934,974
Iowa	621,756
Kansas	464,520
Kentucky	541,944
Louisiana	292,894
Maine	126,834
Maryland	386,612
Massachusetts	942,716
Michigan	1,016,794
Minnesota	698,811
Mississippi	187,981
Missouri	1,111,943
Montana	159,690
Nebraska	347,454
Nevada	31,925
New Hampshire	108,400
New Jersey	1,083,850
New Mexico	105,838
New York	3,293,222
