# This Fly Costs Canada \$12,000,000 A Year!

Name?-Warble Fly.

Character? - Saboteur.

Nature of Sabotage? - Renders hides of cattle unfit for use in leather goods.

Result?-Less leather available for soldiers' boots and other necessary goods.

Cost? - Estimated annual loss caused by warble flies in this country is \$12,000,000.

Sometimes called the heel fly, the warble fly lays its eggs amongst the leg hairs of cattle. These hatch into grubs and work their way through the animal's body to its

back where they punch through the hide. The grubs then drop to the ground and begin their destructive cycle all over again.

To meet the urgent need for a remedy that will stamp out this saboteur, chemistry has developed a powder that attacks the attacker. It may one day bring the menace of the warble fly under control. Produced from tropical plants, it contains a powerful substance called Rotenone which, while highly poisonous to the grub, is harmless to man and domestic animals. Washed on infested cattle it kills the grub and ends the vicious cycle at that

C-I-L Warble Fly Powder is manufactured by the Fertilizer Division of Canadian Industries Limited.

> product will help to save valuable hides for the production of essential leather goods, especially boots for
