

bounces back like a rubber ball. But dark, dingy surfaces absorb light; they blot it out.

In many industrial plants and factories across the country the secret of keeping light bouncing has meant great savings in electrical power used. Ceilings, walls and floors have been turned into huge reflectors by painting with light reflecting finishes. There are no dark surfaces to blot out the lumens (units of light). With no increase in power, there have been important increases in illumination.

Today, conservation of electrical energy is essential to Canada's industrial effort. The amount of power available is definitely limited. It must be made to go as far as possible. "Bouncing Light" helps to stretch our vital supplies of power.

The Paint & Varnish Division of C-I-L produces finishes of high quality and durability. Executives interested in the possibilities of "Bouncing Light" may take advantage of the Division's knowledge regarding the use of paint in salvaging waste light for Victory.
