GREATLY INCREASED VITAMIN"D"

THE vitamin D content of Carnation Milk has been increased from the former 162 to 400 International units per reconstituted quart (half Carnation, half water) . . . nearly 21/2 times as much as before. This additional irradiation assures a margin of safety for the prevention of rickets in normal infants, and provides the vitamin D needed for good bone and tooth development and excellent growth. So now, more than ever, Carnation Milk ranks as a preferred food for bottle-fed babies, for their growing brothers and sisters, and for grownups, who also need "sunshine" vitamin D. This greatly increased amount of essential vitamin D is provided at no extra cost.
