WINDS ITSELF On my trip to the East

recently I took one of our self - winding watches to see for myself how they perform. I was away a month and found the watch only half a minute slow. That was quite satisfactory as it keeps really good time now after a small adjustment. I had not wound or set the watch in that time. The small motion of

one's arm in walking or working keeps the watch wound by means of a small weight inside the case. If laid aside it has enough reserve power to run 18 hours. Of course, you can always wind it like an ordinary watch if desirable.
