CCIENCE has proved there are certain food elements everyone ds for health. If there aren't enough of them in a child's food, serious things can happen-such as stunted growth, soft bones, poor teeth, faulty nerves, loss of appetite, defective eyesight.

Ovaltine supplements the diet with elements frequently deficient in ordinary foods. Three servings of Ovaltine furnish a significant portion of a child's daily requirements of Vitamins A, B1, C, D, Riboflavin (B2), and Niacin and Minerals Calcium, Phosphorus and Iron.

In addition it provides the basic food substances—complete proteins to build muscle, nerve and body cells -high-energy foods for vitality and endurance. It thus acts as an insurance against food deficiencies that retard

normal growth. So if your child eats poorly, is thin, underpar, perhaps nervous, why not try delicious Ovaltine for normal growth and better appetite.
