LANTIGEN LANTIGEN LANTIGEN LANTIGEN LANTIGEN LANTIGEN

for CATARRH,

BRONCHIAL ASTHMA, ANTRUM, SINUS ALSO CATARRHAL AND BRONCHIAL COLDS!

What is LANTIGEN?

Lantigen is a specially prepared dissolved vaccine and has been used successfully in the treatment of various diseases. Lantigen is not a patent medicine. Lantigen is a bacterial vaccine in a dissolved state, devoid of drugs and safe to take. Lantigen is a natural aid. It is produced from the bacteria which are peculiar to the particular disease requiring treatment. In the preparation of Lantigen the organisms are destroyed by a process of dissolution thus releasing the active principles from the bacterial bodies. Being in a completely dissolved state the vaccine is operative locally by absorption into the tissues of the tongue, tonsils, throat, and the intestinal tract and is further operative by means of its distribution throughout the system. More than 150,000 people in Australia have enjoyed relief from the distressing affects of catarrh and allied conditions.

Organs Affected by Catarrhal Poisons

AN EMINENT PHYSICIAN

Writing in the "British Medical Journal," speaks as follows in the issue of January 15, 1936: "In my experience, the oral antigens have been mostly employed for cases of Catarrhal infections, rheumatic conditions and catarrhal enterocolitis. Clinical response has been quite definitely marked." This important statement, however, heralds the dawn of a great release for Catarrhal sufferers.
