Now In Prince Rupert  
Mr. Francks, who is President of the Columbia Co., 605 Dunsmuir Street, Vancouver, is visiting Prince Rupert and will be at the Prince Rupert Hotel November 26. He has with him a complete Ophthalmic Unit and will examine eyes and prescribe lenses as required. Mr. Francks will continue to give the sound advice which established so much confidence among Prince Rupert people during his visit last year.

## C.N.R. Contribution—Telegraphs During War

Details of Great System in Which Prince Rupert Figured Is Revealed

VANCOUVER, Nov. 19.—A major contribution was made by the Canadian National Telegraphs in the construction of the giant wartime communication system in British Columbia, officially known as the Pacific Communications System, details of which were recently revealed by Western Air Command, Royal Canadian Air Force, under whose supervision it was built and operated.

When the present need for a defence communication system was realized early in 1942, the Canadian National Telegraphs was asked to perform much of the important work.

Radio could not be used to span the vital coast territories because of the need for secrecy. Land-lines were essential because their signal energy radiates only a matter of feet; vital military, naval and air force communications were thus safeguarded from Japanese listening posts which could monitor everything but line-of-sight radio stations.

The essential P.C.S. main-line route Vancouver to Prince Rupert was, therefore, carried for more than 600 miles of its 1,000-mile span over Canadian National Telegraph lines. For a distance of 59 miles between Yale and Lytton the rugged, treacherous canyon of the mighty Fraser River was followed; for almost 200 miles—from historic Hazelton to port of Prince Rupert—the turbulent Skeena

## River marked the defense route.

Communications men know of no tougher sections in all Canada in which to construct and maintain land-lines than these two routes.

Cables had to be removed from tunnels and wires strung over inaccessible mountain sites to "smooth out" the lines for high-frequency carrier systems.

Dogged perseverance and frequently high courage were needed to erect this type of construction. Due to the manpower shortage, telegraph gangs were composed of men either below or above military age. Hardy foremen piloted their inexperienced men over the treacherous terrain, setting a bold example at every turn and frequently at great personal risk. One life was lost on a crumbling mountain ledge 500 feet above the swift North Thompson River just east of Lytton.

Long hours daily under all climatic conditions speeded the project. Finally, the hundreds of miles of heavy building and reconstruction saw completion and the precious copper stands linked north and south.

The architects department of the Canadian National participated in the Pacific Communications System by designing and supervising construction of 12 concrete fireproof "repeater" buildings which house the repeater, terminal and carrier equipment, together with 13 residences for maintenance staffs included in the plan. Layout of these buildings, containing telegraph and telephone equipment required special care due to the number and type of machines and equipment installed in them.

Eight repeater stations, to amplify telegraph, telephone and carrier signal currents at approximately 150-mile intervals, were constructed on the mainland and two on Vancouver Island.

### Repeater Stations At Many Points

These repeater stations are located at Lytton, 150-Mile House, Prince George, Burns Lake, Woodcock, Kleena Kleena, Bella Coola, Port Hardy, Tofino and Courtenay. Special hardships were encountered at Kleena Kleena and Bella Coola on the mainland and at Port Hardy and Tofino on Vancouver Island, owing to their isolated locations and difficulties of transportation.

Terminals for the system are located at Vancouver, Victoria and Prince Rupert, the C.N.R.

## MATERNITY AID NEEDS

Dr. Edith Summerskill Urges Importance of Childbirth Relief

LONDON, Nov. 19.—If successful prosecution of the war had depended on the relief of women in childbirth, ways and means would have been found within a month, Dr. Edith Summerskill, parliamentary secretary to the minister of food, told the Married Womens' Association.

She stressed the need for anaesthetics during childbirth and said, "This meeting is an anachronism. It is more than 100 years ago since a woman was given an anaesthetic in confinement, and yet here we are at the beginning of the atomic age having to plead that a simple, foolproof apparatus should be made available to women to

designing and supervising construction of the last two.

To illustrate the extent of the supervision maintained in construction of the repeater stations and terminals, John Schofield, chief architect, Canadian National system, of Montreal, who designed many outstanding structures including the Hotel Vancouver and the new C.N.R. Central Station, Montreal, made two personal inspection trips by air to all the stations while they were being built.

Assistance was also given by the telegraph company, in supplying technical staff for repeater stations situated on its lines, special classes being held in the C.N.R. station, Vancouver. In addition, similar quarters were provided in the same railway station for the R.C.A.F. to instruct its personnel. Both groups were thus prepared for the task of manning the various facilities connected with the great secret project which has just been announced to the public.

CRESSING, Essex, Eng., — A baby rat was found living happily with a litter of kittens on a farm near here.

## Preserved Identity Of Army Balloons

ESSENDINE, Eng., Nov. 19.—Lt.-Gen. Sir Alfred Cordington, who saved the British Army's regimental names from being replaced by numbers, died in this Rutlandshire town at the age of 91. When Sir Alfred was military secretary to Lord Kitchener during the first months of the First Great War he told his chief it would be a terrible blunder if the army were made up of battalions with numbers only. The men, he said, would have no traditions to uphold and no esprit-de-corps, and suggested they should become part of existing regiments. His suggestion was adopted.

## MOOSE DIRECTOR ON VISIT HERE

George S. Hockley, newly appointed regional membership director for Loyal Order of Moose in B.C. as well as District Deputy Supreme Governor of the order, arrived in the city this afternoon from Vancouver on the Princess Adelaide to officiate at the initiation of some 70 new members into the Prince Rupert lodge at ceremonies to be held in the I.O.D.E. Hall on Tuesday night. He will remain in the city for several days to discuss the possibilities of obtaining a new headquarters building for the lodge with local Moose officials.

SCIATICA, LUMBAGO, SPONDYLITIS, FIBROSITIS, NEURITIS AND OTHER GERM-CAUSED RHEUMATIC DISORDERS

**What is LANTIGEN?**  
Lantigen is prepared in a licensed laboratory in Australia. Lantigen is not a patent medicine but is a vaccine in a dissolved state. When taken it stimulates the system to create resistance against disease. It acts first by local absorption by the mucous membrane principally lining the nose, the throat, and the intestinal tract, and it is further operative by means of its distribution through the system.

**AN EMINENT PHYSICIAN**  
Writing in the "British Medical Journal," speaks as follows in the issue of January 15, 1936: "In my experience, the oral antigens have been mostly employed for cases of Catarrhal infections, rheumatic conditions and catarrhal enterocolitis. Clinical response has been quite definitely marked." This important statement, however, heralds the dawn of a great release for Catarrhal sufferers.

**A Dissolved Vaccine to be taken by mouth**
