**AGED FURNACES, HEAT ROBBERS**

The owner of an average heating system five or more years old is warned by National Warm Air Heating Association that the odds are 7 to 10 his winter heating bill is at least 10 percent more than necessary.

This is because 7 out of 10 older type systems of heating are in need of repairing and cleaning. Air leaks in and around furnace combustion chamber, soot in the chimney or furnace, warped burned bars, corroding smoke pipe all create loss of heat right in the furnace itself. Therefore using more fuel to keep the proper temperature.

Heating experts report that home owners are "robbing Peter to pay Paul" through use of improper firing methods and negligence in furnace maintenance.

The majority of costly repairs could have been avoided if owners had followed a regular program of having heating systems inspected each year says the heating association. Minor repairs can add longer service to heating systems and insure health and safety of families.
