## Use Surplus For Housing

VANCOUVER (C)—J. Roxburgh Smith of Montreal said today that the federal government should make available its huge surpluses for a housing construction program and slum clearance.

Mr. Smith, president of the Royal Architectural Institute of Canada, in convention here, said he thought that Ottawa should give certain taxation powers it holds to municipal and provincial governments to enable them to use the revenues for social improvements.

He said the federal government is taking too much money away from the people. "It prevents them from building new homes."

"This money should never reach the government to pile up surpluses it tucks under a carpet."

A. Graham Henderson of Glasgow, president of the Royal Institute of British Architects, said that measures as outlined by Mr. Smith had been taken in Britain since the second world war.

About 95 per cent of post-war housing in Britain has been financed by the state. About 200,000 rental units have been constructed each year.

Mr. Henderson said that Britain had made tremendous progress in slum clearing and that it was continuing at a fast rate. The many years of the war and the post-war austerity "stimulated" rather than stereotyped British methods of architecture and designing.

The shortage of building materials brought out the ingenuity of the individual architect and forced him to build "well with less."
