Mr. Dale now saw the chance

to win an extra trick. He won with dummy's queen of spades, cashed four clubs, dropping two small diamonds on the last two rounds. He reentered his hand with the king of diamonds and at this point Mr. Champion's hand was an open book. He had shown up with a doubleton in both black suits. He had discarded the seven and ten of hearts and so was known to have only the queen left. Mr. Dale simply led a heart, forcing Mr. Champion to win and lead into the ace-jack of diamonds for tricks nine and ten.

Nevertheless Mr. Dale went after spades first. But he did not duck the first heart. He went right up with dummy's ace in the belief that it was practically impossible for the balance of the heart suit to run against him.

First, he reasoned that if the opposing hearts were divided 4-3 he had nothing to fear because then he could not lose more than three hearts and the ace of spades. Even if Mr. Champion held five hearts, Mr. Abel was bound to hold the king, the queen or the ten in a doubleton.

The reasoning was that if Mr. Champion held all three of those cards he would have led the king, not the six spot. If Mr. Abel held the doubleton ten, Mr. Champion would not be in a position to overtake either of those cards without setting up Mr. Dale's nine spot.

So after winning the first trick Mr. Dale promptly led a small spade to his jack. Mr. Champion won with the ace and returned the ten of hearts. Mr. Abel won with his lone king and made the poor return of the ten of spades.
