CASSIAR LIKELY BE ANOTHER KLONDYKE

SUPREMACY OF AIRPLANES IN WAR SHOWN WHEN EARL HAIG SHAM VICTIM

Airplanes Supreme in Sham Battle Fought in Great Britain Yesterday

LONDON, Sept. 23.—The supremacy of the airplane as an implement of war was fully demonstrated yesterday in connection with army manoeuvres. The airplanes carried everything before them in a sham battle that was staged and were the means of ruling out of action Field Marshal Earl Haig and a group of brilliant military officers, who would have been dead men if it had been a real fight. The group of officers was spotted by nine different planes and each one set out to bomb it and thus rid the opposing army of its guiding spirit.

STRIKE DURING SALMON RUN ON FRASER RIVER

Dispute Between Canners and Fishermen as to Price Paid for Pinks

NEW WESTMINSTER, Sept. 23.—While the fishing boats are lying idle an annually heavy run of salmon is taking place and 1,000 fishermen are on strike demanding higher prices. They assert that American canners are paying 20 cents for pinks for which Canadian canners refuse to pay seven.

AIRPLANE WILL FLY TO ALASKA

G. J. Smith Purchases Machine Used for Smuggling Liquor from Canada

SEATTLE, Sept. 23.—The first airplane used in smuggling liquor from Canada into the United States seized recently was sold here yesterday for \$2,500 to G. J. Smith, who said he would operate the machine as a passenger carrier on the Pacific to Alaska and the Pacific Northwest. The former owner of the plane was Carl Swisler, now a fugitive from justice.

HALIBUT IMPORTATION PROVES VERY COSTLY

Discharging of 860,000 Pounds at Vancouver from Japanese Vessel

BURNS READY FOR CATTLE

Abattoir Is Complete and Cold Storage Plant Will be in Operation in Month

The killing plant recently erected by P. Burns Co. is ready for operation but it will be something like a month before the cold storage plant is complete. However, the company is ready to slaughter cattle there at any time and shipments from the interior can be received. A little later a buyer will be sent through but in the meantime the company is prepared to handle any cattle that are offered.

QUEBEC VILLAGE IS NEARLY WIPE OUT

Fire Destroys Church, Business Buildings and Six Dwellings at St. Camille

QUEBEC, Sept. 23.—The village of St. Camille was nearly wiped out by fire last night. The church, business buildings and six dwellings were destroyed, the loss amounting to \$100,000.

MINER WASHES HIS LAST PAN

Ross Patton of the Goldfields of the North Was Buried at Stewart Yesterday

STEWART, Sept. 23.—Another of the old time miners of the famous Klondike days passed away at the week end and was buried here yesterday under the auspices of the Masons and the Pioneers of Alaska, his body being laid in the Stewart cemetery, practically the whole community turning out to the funeral.

Mr. Patton who was about 75 years of age, died of heart failure. He was born in Ireland and when a boy crossed to the States and settled in Ohio. After some years he obeyed the call of the West and spent some years in California. In the Yukon he made several cleanups with claims on Hunker and other rich creeks. He also prospected Nome, Fairbanks and Iditarod and came to Stewart about eight years ago. Since that he spent a year at the mines at Alice Arm.

Patton was one of the real old-time sourdoughs and was a friend of everyone, highly respected wherever he went. His nearest known relative is a niece who lives in Pittsburgh, Pennsylvania.

BALL CHAMPS NOW CERTAIN

Pittsburg Likely to Win National and Washington American League

CHICAGO, Sept. 23.—Pittsburg Nationals, after waiting 16 years are practically certain to win the pennant and represent the league in the world series. Washington Senators will have the honor of meeting them in the contest for the world championship.

The remaining games will have little bearing on the final result, the indication being that Philadelphia Americans and New York Nationals will be the runners-up.

SEAMEN'S STRIKE WILL BE SETTLED

London, Sept. 23.—A report from Australia says the seamen's strike will be settled within a few hours. Waterside dockers are ready for work.

The "baby tire maker," a new invention, which enables auto tires to be made on the street. The inventor is F. L. Newton of the Smithsonian Institute.

Cassiar to be Another Klondyke During Next Few Years According to Editor Who Has Just Returned

SEATTLE, Sept. 23.—Cassiar mining district of British Columbia is due to take the place of the Klondyke during the next few years, in the opinion of Frank Cotter, editor of the Alaska Weekly, who returned here after a four months' trip into the district. The country, he said, was unquestionably the most wonderful he had found in the north. "The showing the country is able to make with extremely limited equipment now available is really surprising and will be even more surprising during the next two years."

Cotter said that he was on Discovery and Gold Pan Creek and saw the last cleanup made on the ground. "It's all yellow nuggety gold and it is enough to make a full pack for a strong man."

Telling of the game conditions, Mr. Cotter said he counted no less than 104 moose in one day on the trail.

Mr. Cotter showed some gold taken out of Palmer Creek, a tributary of the Ptarmigan which in turn is a tributary of the Big Muddy River in the Cassiar district. This was panned indiscriminately from the property by him and his associates. He has staked claims there.

Better Than Gold Pan
Palmer creek is situated approximately 60 miles from Dease Lake in a northeasterly direction, is well wooded, easy of access, and is claimed to show much better colors than do the diggings around Gold Pan Creek, the discovery made by Grady and Ford.

Mr. Cotter believes that it is primarily a hydraulic proposition, although pans from eight to 80 cents in value were obtained. He and his companions were able to spend but a short time on the creek due to a heavy frost which killed all the natural feed for their horses, but they made an examination of the creek for about six miles on each side, getting a good showing on each pan.

The creek is nearly one-half mile wide at the mouth but narrows down to from 350 to 250 feet for the greater part of its length, which is given as 15 miles.

Mr. Cotter and his company will take a big horse outfit in the new strike early next year to carry on development work.

Nickerson Sets Forth His Policy and That of Progressive Party

Declares Forke mainly responsible for elevator and his party real exponents of Laurier Liberalism

I have decided to offer myself as a candidate under the banner of the Progressive Party, which under the leadership of Robert Forke is mainly responsible for the construction of the Prince Rupert elevator, proof of which is given in the statement to the press by Mr. Forke when he assumed the leadership of the party prior to 1924. Condensed, it was about as follows: "We will support the Liberal Party as long as they are prepared to give us what we consider to be in the interests of the West, one of which is an elevator at Prince Rupert."

The Progressive Party are also responsible for the reduction in freight rates on grain moving west, and they represent the producers of the wheat that we hope to see flow through this port.

Therefore, it is in your interests to get behind these men, the only Party which still retains faith in Sir Wilfrid Laurier's policy of rolling back the map of Canada and making it broader and better.

Question of Tariff

So far as the tariff is concerned, we find that at the last session the Liberals voted against the Progressives on a resolution endorsing the principle of low tariffs, and against the Tories on one of raising the tariff. The party that I represent stands for a tariff that will put the development of our natural resources in a position where those engaged therein can meet their competitors in the world's markets.

The old parties have played political football with the problem of "Senate Reform" for years, and notwithstanding all that Premier King had to say on this question, during the last two years, his only solution is to appoint more Liberals. We, however, stand for the principle of an elective Senate.

Only Real Exponent

Liberalism as exemplified by Sir Wilfrid Laurier and his predecessors has been discarded by the King Government, leaving the Progressive Party as the only real exponent of Liberal principles, who refuse to sacrifice the best interests of western Canada and the Maritime Provinces to the "monied kings" of Montreal and Toronto.

Our stand on immigration is that the successful and contented settler is the natural and best immigration agent, and that it is not in the interests of the country to spend the public money on

(Continued on Page Four)

CAILLAUX IS IN NEW YORK

Negotiations Commence Tomorrow For Settlement of French Debt

NEW YORK, Sept. 23.—Expressing confidence that the French debt to the United States can be settled "upon a basis of peace and righteousness," Joseph Caillaux, French minister of finance, with ten colleagues, arrived this morning. Negotiations will open at Washington tomorrow.

ARMED ROBBERS ARE EXECUTED

Twelve Publicly Hanged in Presence of Thousands of People and More to Follow

SHANGHAI, Sept. 23.—Twelve convicted armed Chinese robbers were executed publicly today after a parade along the Nanking road. The hangings were witnessed by thousands. There are still 180 men awaiting execution.

Difficulties Attend Hudson Bay Route.

Among the physical difficulties that attend the Hudson Bay route for grain export is the development of the harbor at Port Nelson. At Prince Rupert nothing had to be done except build the docks. At Port Nelson the water is shallow and has to be dredged and an artificial island built up with the material taken out. The report of some recent visitors to Port Nelson says:

The 3,500 foot steel bridge from the north shore to the crib work for the artificial island which is to provide the docks, was found to be as firm and level as when it was built. On shore there stand the buildings used for housing the 1,100 officials and workmen who were here in 1918, and the supplies necessary for construction purposes. There are the machine shops, electric plant, and a network of narrow gauge railway. Eight locomotives for the railway are carefully housed and prevented from rusting.

Materials and equipment are everywhere in evidence. Large timber for the crib work; a number of floating steel conduits for carrying the material raised by the suction dredge and innumerable lifting cranes, dump cars, steel rails, etc.

Outside the cribwork the water in the harbor is only a few feet deep at low tide. It is proposed to deepen this to 30 feet, which would enable the largest ships to come in. The material raised by the dredges would be conveniently dumped inside the cribwork to form the proposed island. This island is planned to be three miles long, extending upstream, and will be from 400 to 500 feet wide. Work is well advanced on the first 1,700 feet. When the island or a portion of it has been built up, elevators and freight sheds will be erected on it and will provide a terminal for railway trains.

Records kept here for the past seven years show that the river was open on an average, for five and a half months, without the use of ice breakers. The ice goes out between May 24 and June 7, and the river freezes up again, all except a narrow strip out in midstream some time in November.

Conditions Changed Since Railway Begun.

The railway was commenced before the western route was developed. It was not then realized that most of the grain of western Canada would go out by the Pacific ports and through the Panama Canal. The change has for the time being made the Hudson Bay route unnecessary, especially in view of the costly undertaking it is likely to prove to be. At Prince Rupert the port is open all the year and grain can be shipped from there at any time, the upkeep of the harbor is nothing and the outlet to the ocean could not be better.

City Council And Government Property.

A short time ago the city council asked the Provincial Government to sell its property in the centre of the city. This was refused as the government did not think the time opportune. failing in that they now ask the government to donate the property for park purposes.

It would seem that the council does not know what it wants. It is willing to do anything to get the property away from the government.

We sympathize with the first resolution because it is a hardship for the city to have the government pay no taxes. Yet the government treats the city pretty well in other ways which to a large extent makes up for the loss of taxes. With the latest move, which is directly opposed to the first, we have no sympathy. We do not believe it is a place for a public park. It would be much better to have the park farther from the main thoroughfares, especially if children are to be playing there.

Effect of Prohibition in U.S. on Young People is Reported on by the Research Committee

WASHINGTON, Sept. 23. — An exhaustive discussion of the effect of prohibition on crime, conditions in settlement neighborhoods, drug addiction, the morals of the young, and respect for law in general was made public by the Research and Education Department of the Federal Council of Churches as a third section of its special report on the social consequences of prohibition laws.

While pointing out that a lack of complete data makes definite conclusions impossible, the report made these assertions: The tendency of young people of the present day to depart from conventional rules of behavior pre-toward their government, although it often gives cause for alarm, is a result of the fact that prohibition has made no more decisive effect in heightening their moral tone, giving food for earnest thought.

Crime statistics indicate a rapid increase in violations of law, chiefly of the misdemeanor class, but it is "gratuitous" to reason it would seem to be a blame prohibition, and "all that mistake to rest the appeal for can be asserted is that prohibition has thus far not prevented merely upon the general duty to obey the law." Rather, an attitude of intelligent sympathy toward the law itself must be built up if it is to be generally observed.

Effect on Schools

Reports of school administrators and of teachers who have made extensive studies of moral problems in the schools

assertions that prohibition give little support to the theory under prohibition but that the law nevertheless is widely violated and "the bootlegger is getting rich."

Assertions that prohibition give little support to the theory that prohibition leads to a great asset. Certainly, the non-observance of the law by parents has a rather tragic effect on boys and girls.

In the colleges, undoubtedly, some alarming conditions have developed. Even in a conservative denominational college a live extension eastward of the No. 4 vein. Gold values up to \$73 to the ton were obtained at this point and further work will be done to open the vein next season.

It has apparently been demonstrated by the amount of surface work done, and in the depth attained in the shaft and drift and drift tunnels from the surface, that a considerably greater depth is necessary to prove the property, and that such work is fully warranted by the findings already made.

The Cornerstone Group, consisting of the Cornerstone, Prince Eddie, Melbourne Cup, and Golden Link mineral claims, is owned by J. Reid of Atlin. The claims are situated on the west end of Munroe mountain. The general rock formation is massive granite, within which is a belt of coarse, loose grained, more or less decomposed granite, in which occur pegmatite veins. Some work was done on the face of a bluff on the north side of the mountain in one of these pegmatite veins. It shows to be about 4 feet wide, mineralized with a little disseminated pyrite and claimed by the owner to carry values in gold, silver, tin, and tungsten. A sample across 4 feet failed to show any values other than a trace of gold and a trace of silver.

Up to the end of 1923 the property had a considerable amount of exploratory and development work by way of open-cutting, short tunnels, and a shaft sunk to 50 feet and drifting therethrough. The surface work has disclosed in the prevailing country rock of massive granite a number of well defined fissure veins up to 14 feet in width, much oxidized on the surface and, as subsequent work has shown, to a very considerable depth. In the oxidized material is found lumps and ribs of ore consisting of quartz mineralized with galena, zinc-blende, and pyrite, carrying good values in gold, silver, and lead, the silver being the important value.

Last year the compressor, put on the ground the previous winter, was erected on the Cherokee Fraction; the drift east on the vein into the hill was extended 80 feet, making a total distance of 120 feet from the shaft. There was a decided improvement in the ore as depth was attained in the main shaft, due to the lessening of the oxidation, and the increase of sulphide contents. The drift east, however, went through the ore shoot and at the face the vein width is 4 feet, assaying (manager's sampling): Gold, 10 cents; silver, 2.3 oz. to the ton; and lead, 3 per cent. A shipment of 30 tons sent to the Trail smelter, which was sorted from the drift and the dump at the collar of the shaft, assayed: Gold, 0.16 oz.; silver, 75.7 oz. to the ton; lead, 29.25 per cent; and zinc, 12.4 per cent.

The shaft was sunk 25 feet deeper in the vein, showing mixed ore, assaying across 3 1/2 feet at the bottom: Gold, \$2.80; sil-

This New Laundry Soap

saves you the hardest work of washday
soaks dirt out—no more hard rubbing

Simply soaking in rich Rinso soap-suds takes the place of rubbing—suds does the hard work for you. The loosened dirt comes out easily. Even grimy places where dirt is ground-in come clean with so little trouble to you—just a light rub.

Because Rinso dissolves completely, it rinses out thoroughly. No bits of soap left to turn your clothes yellow under the iron.
